*China's English* Bob Adamson, 2004-04-01 This book traces the history of English education in the People's Republic of China from 1949 to the present day It uses the junior secondary school curriculum as the means to examine how English curriculum developers and textbook writers have confronted the shifting ambiguities and dilemmas over five distinct historical periods The study of the processes of curriculum development and the products such as syllabi and textbooks offers insights into the construction of an official English as well as what was considered as acceptable content in English This book addresses fundamental and significant questions concerning the English promoted in China namely its characteristics its changes over time and explanations for such changes and the kind of content that has been viewed as appropriate for textbooks To investigate these issues the analysis draws on qualitative and quantitative data such as interviews with principal stakeholders and analysis of the syllabus and recommended textbooks Specifically it looks at the choice and organization of linguistic components and the orientation and messages of the curriculum Language education in China during the second half of the twentieth century might arguably be called the world's largest language engineering project In this comprehensive study Dr Adamson examines a part of that project by charting the twists and turns of English language education from the pre-revolutionary period to the present He successfully illustrates how tensions in China's massive educational system are negotiated from center to periphery how textbook writers adapt to the socio-political mandates of their time to construct formal school curricula Adamson also raises significant questions regarding the contradictions inherent in Chinese globalization

Heidi Ross Professor Department of Educational Leadership and Policy Studies School of Education Indiana University at Bloomington Bob Adamson has provided in this book one of the first detailed studies published in English of the history of a school subject in the PRC The study provides fascinating insights into the changing nature of the English curriculum the shifting socio-political context of the PRC and their complex interrelationships

Paul Morris President The Hong Kong Institute of Education The learning of English is a crucial aspect of China's opening up to the world and increasingly prominent global role This welcome volume provides an in-depth historical perspective on this important subject including the recent periods of modernization 1978-1993 and globalization 1993 to the

present It should be compelling reading for all those involved with contemporary China across a wide spectrum of areas Ruth Hayhoe University of Toronto President Emerita The Hong Kong Institute of Education

**Food Process Engineering** Dennis R. Heldman, 2012-12-06 The Second Edition of Food Process Engineering by Dr Dennis Heldman my former student and co author Paul Singh his former student attests to the importance of the previous edition In the Foreword to the First Edition I noted the need for people in all facets of the food processing industry to consider those variables of design of particular importance in engineering for the food processing field In addition to recognizing the many variables involved in the biological food product being handled from production to consumption the engineer must oftentimes adapt equations developed for non biological materials As more and more research is done those equations are appropriately modified to be more accurate or new equations are developed specifically for designing to process foods This Edition updates equations used This book serves a very important need in acquainting engineers and technologists particularly those with a mathematics and physics background with the information necessary to provide a more efficient design to accomplish the objectives Of prime importance at present and in the future is to design for efficient use of energy Now it is often economical to put considerably more money into first costs for an efficient design than previously when energy costs were a much smaller proportion of the total cost of process engineering
