Animal Welfare in World Religion Joyce D'Silva,2023-05-01 This unique and readable book examines the relationship between religion and animal welfare taking a detailed dive into the teachings and practices of the major world religions While there are many books expounding the beliefs of the major religions and many about the rights and welfare of animals there are few linking the two With each chapter focusing on one of the five major religions Judaism Christianity Islam Hinduism and Buddhism the book explores the beliefs and practices which drive our relationship with and treatment of animals The book draws on the scriptures of the major faiths and includes the voices of leading historical religious figures and contemporary faith leaders In doing so it compares the teachings of old with contemporary practices and showcases the impact of the major religions on both the protection and exploitation of animals from running animal sanctuaries to participating in or condoning cruel sports and factory farming Importantly the book also includes a chapter looking beyond the major world religions where it examines a wider range of beliefs and practices including Indigenous peoples from the USA and Australia Jainism Sikhism and Rastafarianism to provide fascinating insights into another range of beliefs and views on the human animal relationship Overall this book challenges and encourages religious leaders and followers to re examine their teachings and to prioritise the well being of animals This book is essential reading for those interested in the role of religion in animal welfare human animal studies and animal welfare and ethics more broadly **Machines like Us** Ronald J.

Brachman, Hector J. Levesque, 2023-10-17 How we can create artificial intelligence with broad robust common sense rather than narrow specialized expertise It s sometime in the not so distant future and you send your fully autonomous self driving car to the store to pick up your grocery order The car is endowed with as much capability as an artificial intelligence agent can have programmed to drive better than you do But when the car encounters a traffic light stuck on red it just sits there indefinitely Its obstacle avoidance lane following and route calculation capacities are all irrelevant it fails to act because it lacks the common sense of a human driver who would quickly figure out what s happening and find a workaround In Machines like Us Ron Brachman and Hector Levesque both leading experts in AI consider what it would take to create machines with common sense rather than just the specialized expertise of today s AI systems Using the stuck traffic light and other relatable examples Brachman and Levesque offer an accessible account of how common sense might be built into a machine They analyze common sense in humans explain how AI over the years has focused mainly on expertise and suggest ways to endow an AI system with both common sense and effective reasoning Finally they consider the critical issue of how we can trust an autonomous machine to make decisions identifying two fundamental requirements for trustworthy autonomous AI systems having reasons for doing what they do and being able to accept advice Both in the end are dependent on having common sense BrainGymJr: Read and solve comprehension based short stories III (Age 5-6 years)
