*Groundwater and Human Development* Emilia Bocanegra, Mario Hernandez, Eduardo Usunoff, 2005-06-30 It has long been recognized that groundwater plays a central role in the development of human societies Groundwater resources are readily and reliably available compared with surface water resources In many contexts the presence of groundwater ensures the

presence of life itself The XXXII IAH International Association of Hydrogeologists and VI ALHSUD Latin American Association of Groundwater Hydrology for Development Congress on Groundwater and Human Development held in 2002 in Mar del Plata Argentina brought together over 400 participants from more than 40 countries This lively gathering of water enthusiasts exchanged experiences of both fieldwork and research Topics under discussion and scrutiny included Groundwater and Quality of Life Groundwater in Urban Suburban and Rural Systems Transboundary Aquifers Hydrogeology of Large Plains Coastal Aquifers Methods for Groundwater Studies and Education about Groundwater and Groundwater Management This book contains selected papers plenary lectures and material from workshops illustrating the contribution of modern hydrogeology to sustaining humanity's thirst for fresh and safe water

**Regional Ground-Water Quality**

William M. Alley, 1993-06-15 Ground water serves as the main source of drinking water for 50% of the United States as a whole and for 97% of rural populations in particular In addition to public concern with point sources of contamination such as landfills and hazardous waste disposal sites current attention has now come to focus on the overall quality of ground water resources Regional Ground Water Quality offers the first detailed guidance for conducting ground water quality investigations in a regional context This exceptional volume combines hydrogeologic and geochemical principles as well as statistical principles within a unique conceptual framework that helps readers produce efficient meaningful and successful ground water assessments Regional Ground Water Quality will be a valuable resource when first approaching a regional scale study and when designing specific regional scale studies Throughout the book topics emphasize the value of studying regional ground water quality at multiple spatial and temporal scales Up to date coverage of essential processes and methodologies includes multi scale design concepts for regional ground water quality studies the fate and transport of organic and inorganic materials including nitrates pesticides pathogens acid precipitation natural radionuclides saltwater intrusion and problems in karst aquifers basic concepts of organic and inorganic chemistry a review of environmental isotopes and geochemical modeling statistical concepts for ground water quality surveys and geostatistical analysis the effects of surface water ground water interactions on ground water quality the relationship between ground water quality and land use regional geochemistry principles Readers will be brought completely up to date with the latest research in ground water assessments such as novel methods for dating young ground water including the use of CFCs tritium helium 3 and krypton 85 The book also examines the uses of organic compounds as time and source markers ground water vulnerability analyses applications of subsurface microbiology at the regional scale and design of well water surveys Invaluable case studies drawn from international projects graphically demonstrate concepts discussed in the book These case studies describe successful regional ground water assessment efforts conducted in various areas and include a look at the uses and limitations of existing ground water quality data A first of its kind resource Regional Ground Water Quality will be essential reading for scientists and engineers in hydrology water resources agricultural sciences and environmental sciences

**Public Health Risk Assessment for Human Exposure to Chemicals** K. Asante-Duah, 2012-12-06 In fact with the control and containment of most infectious conditions and diseases of the past millennium having been achieved in most developed countries and with the resultant increase in life expectancies much more attention seems to have shifted to degenerative health problems Many of the degenerative health conditions have been linked to thousands of chemicals regularly encountered in human living and occupational work environments It is important therefore that human health risk assessments are undertaken on a consistent basis in order to determine the potential impacts of the target chemicals on public health

**Investigating Groundwater Systems on Regional and National Scales** National Research Council, Commission on Geosciences, Environment, and Resources, Water Science and Technology Board, Committee on USGS Water Resources Research, 2001-01-19 Groundwater is a basic resource for humans and natural ecosystems and is one of the nation s most important natural resources Groundwater is pumped from wells to supply drinking water to about 130 million U S residents and is used in all 50 states About 40 percent of the nation s public water supply and much of the water used for irrigation is provided by groundwater Despite the importance of groundwater as one of our most precious natural resources an organized effective program to provide an ongoing assessment of the nation s groundwater resources does not exist With encouragement from the U S Congress the USGS is planning for a new program of regional and national scale assessment of U S groundwater resources thus helping bring new order to its various groundwater resources related activities The Survey s senior scientists requested advice in regard to the design of such a program In response the committee undertook this study in support of developing an improved program relevant to regional and national assessment of groundwater resources This report is a product of the Committee on USGS Water Resources Research which provides consensus advice on scientific research and programmatic issues to the Water Resources Division WRD of the U S Geological Survey USGS The committee is one of the groups that work under the auspices of the Water Science and Technology Board of the National Research Council NRC The committee considers a variety of topics that are important scientifically and programmatically to the USGS and the nation and it issues reports when appropriate This report concerns the work of the WRD in science and technology relevant to assessments of groundwater resources on

regional and national scales The USGS has been conducting scientific activity relevant to groundwater resources for over 100 years and as summarized in Appendix A today groundwater related work occurs throughout the WRD
