Chaturvedi, 2011-12-20 Regulation of India's rivers and other water systems has been evolving for thousands of years in the face of varying socioeconomic and technological conditions. India's Waters Environment Economy and Development is a study of the current state of development and proposed future development policies of the government of India which is the developmental agency. The author first addresses India's physical and hydrological environment. He explains how the government using his research has estimated its usable resources and water requirements for life environment and economy for the next half century. The book describes how based on its own assessment the government has made detailed suggestions about developing India's water resources. After covering the overall national study and analysis the author addresses the current development of the major river basins the Indus and Ganges Brahmaputra Meghna GBM basins as well as the Central Peninsular and others. He follows with analysis of watershed groundwater and command area development. Inter basin water transfer has been considered throughout India's long history. This book briefly details suggestions for interlinking India's rivers and concludes by presenting legal framework and institutional issues. This is the first of Dr M C Chaturvedi's three studies on the waters of India. The second India's Waters Advances in Development and Management presents his proposals for revolutionizing their development and the third focuses on development of the GBM basin which is now an international river system. These studies are a unique contribution to the science and art of water resource development from a highly respected expert. He has designed most of the major projects in the Ganga basin and continues to teach and conduct research at the international level.
