## **Group Technology Production Engineering Series:**

**Group Technology** Inyong Ham, Katsundo Hitomi, Teruhiko Yoshida, 2012-12-06 Mass production and mass consumption so far considered virtues in a free economic society have changed. Various problems have occurred including economic stagnation, energy crisis, shortage of material resources, proliferation of pollution, lack of skilled labor, rapid changes of product design, technical innovation, and others. Moreover, individual manufacturing firms must take steps to adopt multi-product small lot sized batch type production as a type of production in order to adapt themselves to a market movement characterized by a diversified and specialty oriented society and a short product life cycle. The number of manufacturing firms worldwide that use a type of multi-product small lot sized production is expected to increase. This is so even in the United States which has been said to be a country of mass production. Multi-product small lot sized production has been considered to be a milestone to flow type mass production which has been thought to be the most effective production system. Intensive efforts have been made to investigate mass production systems from both theoretical and practical viewpoints. Few studies have been made for multi-product small lot sized production batch type manufacturing. Considering the present business circumstances faced with various difficulties, it is strongly required to establish some theories useful for making practically effective and flexible multi-product small lot sized production systems. Several effective approaches to the batch type manufacturing systems have been developed. Group technology GT is one such method that has steadily obtained great interest from progressive manufacturing firms all over the world.

### **Optimal Design of Flexible Manufacturing**

**Systems** Ulrich A.W. Tetzlaff, 2013-03-09 Flexible manufacturing systems are complex production systems with considerable high investment costs. This book intends to show the reader how the design of such a system can be optimized. Thereby it addresses the academic world in management science and industrial engineering as well as system planners in industry. First the design problems are analysed in detail and a planning concept is presented. Afterwards possible tools for the design process are described as there are mathematical programming, queueing networks, computer simulation, perturbation analysis, Petri nets, group technology, and knowledge based systems. The major part of the book however concerns the description of existing optimization models based on mathematical programming. Each model is explained and discussed in detail and for new models developed by the author numerical examples are given. Finally some distinct guidelines are presented which help the system planners to select the appropriate model for their planning problems.

*Simulated Evolution and Learning* Tzai-Der Wang, 2006-10-06 This book constitutes the refereed proceedings of the 6th International Conference on Simulated Evolution and Learning SEAL 2006 held in Hefei China in October 2006 The 117 revised full papers presented were carefully reviewed and selected from 420 submissions Handbook of Cellular Manufacturing Systems Shahrukh A. Irani, 1999-04-15 Cellular manufacturing CM is the grouping of similar products for manufacture in discrete multi machine cells It has been proven to yield faster production cycles lower in process inventory levels and enhanced product quality Pioneered on a large scale by Russian British and German manufacturers interest in CM methods has grown steadily over the past decade However there continues to be a dearth of practical guides for industrial engineers and production managers interested in implementing CM techniques in their plants Bringing together contributions by an international team of CM experts the Handbook of Cellular Manufacturing Systems bridges this gap in the engineering literature Group Technology and Cellular Manufacturing Nallan C. Suresh, John M. Kay, 2012-12-06 Group Technology and Cellular Manufacturing GT CM have been widely researched areas in the past 15 years and much progress has been made in all branches of GT CM Resulting from this research activity has been a proliferation of techniques for part machine grouping engineering data bases expert system based design methods for identifying part families new analytical and simulation tools for evaluating performance of cells new types of cell incorporating robotics and flexible automation team based approaches for organizing the work force and much more however the field lacks a careful compilation of this research and its outcomes The editors of this book have commissioned leading researchers and implementers to prepare specific treatments of topics for their special areas of expertise in this broad based philosophy of manufacturing The editors have sought to be global both in coverage of topic matters and contributors Group Technology and Cellular Manufacturing addresses the needs and interests of three groups of individuals in the manufacturing field academic researchers industry practitioners and students 1 The book provides an up to date perspective incorporating the advances made in GT CM during the past 15 years As a natural extension to this research it synthesizes the latest industry practices and outcomes to guide research to greater real world relevance 2 The book makes clear the foundations of GT CM from the core elements of new developments which are aimed at reducing developmental and manufacturing lead times costs and at improving business quality and performance 3 Finally the book can be used as a textbook for graduate students in engineering and management for studying the field of Group Technology and Cellular Manufacturing **Handbook of Occupational Groups and Families**, 1998 **Handbook of Occupational Groups and Families, February 1998**, 1998

**An Introduction to Computer Aided Production Management** S. Childe, 1996-11-30 The control of manufacturing operations is of crucial importance in industry The correct regulation of manufacturing activities makes the difference between meeting and missing customer requirements Nowadays computerised solutions are available as an aid to production management However many companies proceed to use sophisticated computer tools without first understanding the basic

operating principles This book is written for students of manufacturing systems as well as people in industry who need a concise explanation of the concepts of Computer Aided Production Management CAPM or who may be looking for new ideas

**Cellular Manufacturing Systems** N. Singh,D. Rajamani,2012-12-06 Batch manufacturing is a dominant manufacturing activity in the world generating a great deal of industrial output In the coming years we are going to witness an era of mass customization of products The major problems in batch manufacturing are a high level of product variety and small manufacturing lot sizes The product variations present design engineers with the problem of designing many different parts The decisions made in the design stage significantly affect manufacturing cost quality and delivery lead times The impacts of these product variations in manufacturing are high investment in equipment high tooling costs complex scheduling and loading lengthy setup time and costs excessive scrap and high quality control costs However to compete in a global market it is essential to improve the productivity in small batch manufacturing industries For this purpose some innovative methods are needed to reduce product cost lead time and enhance product quality to help increase market share and profitability What is also needed is a higher level of integration of the design and manufacturing activities in a company Group technology provides such a link between design and manufacturing The adoption of group technology concepts which allow for small batch production to gain economic advantages similar to mass production while retaining the flexibility of job shop methods will help address some of the problems

**Annual Historical Review** Rock Island Arsenal (Ill.),1980 Emerging Optimization Techniques In Production Planning & Control Godfrey C Onwubolu,2002-05-20 This book proposes a concept of adaptive memory programming AMP for grouping a number of generic optimization techniques used in combinatorial problems The same common features seen in the use of memory and a local search procedure drive these emerging optimization techniques which include artificial neural networks genetic algorithms tabu search and ant systems The primary motivation for AMP therefore is to group and unify all these techniques so as to enhance the computational capabilities that they offer for combinatorial problems encountered in real life in the area of production planning and control The text describes the theoretical aspects of AMP together with relevant production planning and control applications It covers the techniques applications and algorithms The book has been written in such a way that it can serve as an instructional text for students and those who are taking tuition on their own The numerical examples given are first solved manually to enhance the reader s understanding of the material and that is followed by a description of the algorithms and computer results This way the student can fully follow the material The algorithms described for each application are useful to both students and practitioners in grasping how to implement similar applications in computer code using emerging optimization techniques
