Group Process As A Helping Technique:

The Group Process as a Helping Technique Sheila Thompson, Jack H. Kahn, 1970 *Working with Older Adults: Group Process and Technique* Barbara Haight, Faith Gibson, 2005-03-30 Beginning with an overview of the changing world of aging this book goes on to address practical principles and guidelines for group work [The Group Process as a Helping Technique](#) Sheila Thompson, J. H. Kahn, 1973 [The Cry for Help and the Professional Response](#) Jack Kahn, Jean P. Nursten, 2013-10-22 At present any one of a large number of professional services may be called upon to deal with the distress of individuals and families They may be concerned successively or simultaneously in co operation with one another or in competition In this profusion of services a large number of problems fail to receive help This book offers a way of defining the help that the different services can give The authors maintain that each of the professions has its distinctive approach and that each of these approaches should have its justification in theory and practice **Perspectives in Group Psychotherapy (RLE: Group Therapy)** P.B. de Maré, 2014-09-19 This book originally published in 1972 aimed to provide a theoretical framework for group therapists to guide them through the mass of variables which beset them Its scope therefore is extremely broad for it also touches on philosophy psychology sociology communication and general systems theory In the last chapter certain conclusions are drawn concerning the relationship between group and psycho dynamics The book will be of interest to those who have already had some experience of small medium or large groups and who want to think about their work in more general terms it was not at the time widely realised how radically different and how potentially powerful are the implications of group procedures not only for therapy but in such fields as education industry and politics Freud recognised this when he pointed out the dilemma of having to procure for the group precisely those features which were characteristic of the individual and which are extinguished in him by the formation of the group Whilst the problem for the individual is the intrusion of unconscious factors for the group it is the group s equivalent of consciousness namely communication and organization which is in a quandary The group model differs crucially from the psychological but they may relate in the sense that as Freud indicated neurosis represents a recapitulation within the individual of mankind s group history The unconscious mind then is a group phenomenon In other words group theory turns psychoanalysis upside down and begins at the point where Freud left off relating neurosis to its social sources In the light of the group approach therefore neurosis and certain of the psychoses can be viewed as localized deposits of unresolved group experiences within the individual whether they be past current or an expectation of the future a feature which makes traumatic neuroses more understandable since they cannot be explained in terms of infantile neurosis The author suggested the possibility of a new development in group techniques namely that of large group therapy freed of community ties or training considerations in which attitudes and ideologies make themselves evident not as cloudy idealistic non sequiturs but as crucial and clearly definable climates which either impede or promote communication and the flow of information [GIS for Group Decision](#)

Making Piotr Jankowski, 2001-01-18 In today's society it is very common for decisions that influence us all to be made by a combination of interested parties all with their own agenda In this instance how can we be sure that the decision is the correct one not just decided by the group with the most political influence or most money Such groups have now become fundamental deci
