Groupware And Authoring:

Groupware and Authoring Roy Rada, 1996 Groupware and Authoring combines the experience of an international group of experts in the fields of groupware and software engineering to examine the human and technical issues surrounding shared writing tools The book covers the human factors research and requirements behind the design of shared writing tools the technical factors and innovations involved in building these systems and specific applications of these tools It also examines the factors involved in making Groupware a commercial product This book will be an essential guide for students and researchers wanting to find out more about this exciting area Covers the work of the most prominent people in the field Includes coverage of both technology and people Presents new systems and new experiences

Studying Virtual Math Teams Gerry Stahl, 2010-05-03 Studying Virtual Math Teams centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CSCL More generally the theme of sense making is a central topic in information science While many authors allude to these topics few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making This book presents a coherent research agenda that has been pursued by the author and his research group The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CSCL research field The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project These chapters are followed by several studies by international collaborators discussing the group discourse the software affordances and alternative representations of the interaction all using data from the VMT project The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences In addition to substantial introductory and concluding chapters this important new book includes analyses based upon the author's previous research thereby providing smooth continuity and an engaging flow that follows the progression of the research The VMT project has dual goals a to provide a source of experience and data for practical and theoretical explorations of group knowledge building and b to develop an effective online environment and educational service for collaborative learning of mathematics Studying Virtual Math Teams reflects these twin orientations reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2.0 educational math service It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse

Handbook of Writing and Text Production Eva-Maria Jakobs, Daniel Perrin, 2014-08-19 Writing matters and so does research into real life writing The shift from an industrial to an information society has increased the importance of

writing and text production in education in everyday life and in more and more professions in the fields of economics and politics science and technology culture and media Through writing we build up organizations and social networks develop projects inform colleagues and customers and generate the basis for decisions The quality of writing is decisive for social resonance and professional success This ubiquitous real life writing is what the present handbook is about The de Gruyter Handbook of Writing and Text Production brings together and systematizes state of the art research The volume contains five sections focussing on I the theory and methodology of writing and text production research as well as on problem oriented and problem solving approaches related to II authors III modes and media IV genres and V domains of writing and text production Throughout the 21 chapters exemplary research projects illustrate the theoretical perspectives from globally relevant research spaces and traditions Both established and future scholars can benefit from the handbook s fresh approach to writing in the context of multimodal multi semiotic text production

Transaction Management Support for Cooperative Applications Rolf A. de by, Wolfgang Klas, J. Veijalainen, 2012-12-06 Transaction Management Support for Cooperative Application is a comprehensive report on a successful international project called TRANSCOOP carried out from 1994 to 1997 by a group of European scientists But the book is also much more than that namely an ambitious attempt to integrate Computer Supported Cooperative Work CSCW Workflow Management Systems WFMS and Transaction Processing TP technologies The very term em cooperative transactions is in itself

contradictory Cooperation technologies such as CSCW aim at providing a framework for information exchange between cooperating human participants In contrast traditional transaction technologies allow concurrent users to operate on shared data while providing them with the illusion of complete isolation from each other To overcome this contradiction the TRANSCOOP researchers had to come up with a new and original notion of correctness of concurrent executions based on controlled exchange of information between concurrent users Merging histories in accordance with prespecified commutativity rules among concurrent operations provides transactional guarantees to activities such as cooperative designing which until now had to be carried out sequentially As an interesting consequence it also provides a basis for management of consistency between disconnected or mobile users who operate independently and yet must occasionally reconcile their work with each other

Enterprise Knowledge Infrastructures Ronald Maier, Thomas Hädrich, René Peinl, 2005-04-04 Success of an organization is increasingly dependent on its capability to create an environment to improve the productivity of knowledge work This book focuses on the concepts models and technologies that are used to design and implement such an environment It develops the vision of a modular yet highly integrated enterprise knowledge infrastructure and presents an ideal architecture replete with current technologies and systems The most important streams of technological development that are covered in the book are computer supported cooperative work document and content management e learning enterprise portals information life cycle management knowledge management mobile computing and the Semantic Web It includes learning goals exercises and case examples that help the reader to easily understand and practice the concepts The book is targeted at advanced bachelor and master students Practitioners profit from insights into the importance of technologies and systems and their application

Emergent Web Intelligence: Advanced Semantic Technologies Youakim Badr, Richard Chbeir, Ajith Abraham, Aboul-Ella Hassanien, 2010-06-17 The success of the World Wide Web depends on the ability of users to store process and retrieve digital information regardless

of distance boundaries languages and domains of knowledge The universality and exhibility of the World Wide Web have also enabled the rapid growth of a variety of new services and applications based on human machine interaction The semantics of exchanged information and services should be useful not only for human to human communications but also in that machines would be able to understand and automatically process web content Semantics give well defined meaning to web content and enable computers and people to work in cooperation Today the crucial challenge becomes the development of languages to express information in a machine processable format Now more than ever new advanced techniques and intelligent approaches are required to transform the Web into a universal reasoning and computing machine Web intelligence attempts to deal with this challenge by exploiting information technologies and artificial intelligence approaches to design the next generation of web empowered systems and services

On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops Zahir Tari, Angelo Corsaro, 2004-10-14 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself In fact their attendance was largely sponsored by the other participants If evaluated as successful it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting application pull created by the Internet and the so called Semantic Web For DOA 2004 the primary emphasis stayed on the distributed object infrastructure for ODBASE 2004 it was the knowledge bases and methods required for enabling the use of formal semantics

and for CoopIS 2004 the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations. These subject areas naturally overlap and many submissions in fact also treat envisaged mutual impacts among them.

Workflow Management Systems for Process Organisations Thomas Schäl, 1998-11-11 This book introduces the perspective of customer driven and teamwork oriented process organisation. Its aim is to design and test concepts of Computer Supported Cooperative Work especially concepts for workflow management systems in order to fundamentally improve business processes in enterprises. Its methodological approach to analysis and design of cooperative networks is a response to shortcomings of current support systems and misunderstandings about cooperative work and team based organisations. Several different commercial workflow management systems are presented and distinguished in terms of their main characteristics. Novel kinds of business process analysis are proposed leading to interesting new combinations of information and cooperation technologies. The book not only presents ways to get around the pitfalls resulting from a naive use of these technologies but also identifies design guidelines and critical success factors.

Artificial Intelligence in Industrial Decision Making, Control and Automation S.G. Tzafestas, H. B. Verbruggen, 2012-12-06 This book is concerned with Artificial Intelligence AI concepts and techniques as applied to industrial decision making control and automation problems. The field of AI has been expanded enormously during the last years due to that solid theoretical and application results have accumulated. During the first stage of AI development most workers in the field were content with illustrations showing ideas at work on simple problems. Later as the field matured emphasis was turned to demonstrations that showed the capability of AI techniques to handle problems of practical value. Now we arrived at the stage where researchers and practitioners are actually building AI systems that face real world and industrial problems. This volume provides a set of twenty four well selected contributions that deal with the application of AI to such real life and industrial problems. These contributions are grouped and presented in five parts as follows: Part 1 General Issues Part 2 Intelligent Systems Part 3 Neural Networks in Modelling Control and Scheduling Part 4 System Diagnostics Part 5 Industrial Robotic Manufacturing and Organizational Systems. Part 1 involves four chapters providing background material and dealing with general issues such as the conceptual integration of qualitative and quantitative models the treatment of timing problems at system integration and the investigation of correct reasoning in interactive man robot systems.
