**Perspective of Cuba's Changing Landscapes** Jennifer Gebelein, 2022-08-08 This book is based on research that gives the reader a nonfiction view of how Cuba's landscape has changed since the time when Columbus first set foot on the island and encountered the Indigenous peoples who lived there in 1492 to present day. An analysis of landscape change over time is presented and that transformation from a heavily forested island to less than currently 18% forest cover is described. The government has established a system of protected areas and strong governmental controls over environmental policies and the manner with which the island can be built upon by foreign investors, urban expansion projects or natural resource exploitation. Current GIS and remote sensing research of Cuba's atmosphere, physical landscape and aquatic features is provided to underscore the complex environmental structures that epitomize Cuba. The author discusses past, present and future impact factors including history, technological assessments, laws and policies, relationships with other countries and education.

**Kenya's Changing Landscape** Raymond M. Turner, H. Awala Ochung', Jeanne B. Turner, 2021-11-09 Botanist Homer L. Shantz took photographs of the Kenyan landscape in the early 1920s as part of his effort to document the natural plant cover of Africa. He returned there with B. L. Turner in the late 1950s to repeat the photographs. In 1990 Raymond Turner traveled to Kenya under the auspices of the National Geographic Society in order to match the photographs made by Shantz and B. L. Turner and to show the changes that have occurred over the decades since Shantz's initial journey. Turner's comparative photos and research into the botanical record dramatically reflect the encroachment of woody plants in arid areas and the increasing human impact in more humid locales. Turner's discussions of the photographs and the conclusions he draws provide an important reference for ecologists, geographers, botanists and other researchers attempting similar studies. By documenting vegetation change in a region broadly similar climatically to North America's subtropical deserts and grasslands but different in its wildlife and its human culture, the book shows that the endpoints of landscape status are similar despite the vastly different histories of these two regions of the world.

*Population, Land Use, and Environment* National Research Council, Division of Behavioral and Social Sciences and Education, Center for Economics, Governance, and International Studies, Committee on the Human Dimensions of Global Change, Panel on New Research on Population and the Environment, 2005-09-15 *Population Land Use and Environment Research Directions* offers recommendations for future research to improve understanding of how changes in human populations affect the natural environment by means of changes in land use such as deforestation, urban development and development of coastal zones. It also features a set of state-of-the-art papers by leading researchers that analyze population-land-use-environment relationships in urban and rural settings in developed and underdeveloped countries and that show how remote sensing and other observational methods are being applied to these issues. This book will serve as a resource for researchers, research funders and students.
