**Growth Regulation by Nuclear Hormone Receptors** Malcolm G. Parker,1992-01-01 Reviews the current thinking on the role of hormones in cancer in 15 studies designed to bridge the disciplinary gap between researchers clinicians and epidemiologists working with cancer Emphasizes the importance of estrogen and androgen receptors the most thoroughly studied and includes treatment Handbook of Growth Factors (1994) Enrique Pimentel,2017-11-22 Volume I of this book provides a comprehensive discussion of the factors involved in regulation of the cell cycle the general biological properties of growth factors and the receptor and postreceptor mechanisms of action of these signaling agents It evaluates the possible role of growth factors in the regulation of proto oncogene and tumor suppressor gene expression and the development of neoplastic processes is discussed in detail **Environment, Development, and Evolution** Brian Keith Hall,Roy Douglas Pearson,Gerd B. Müller,2004 Leading researchers in evolutionary developmental biology seek linkages between and a synthesis of development physiology endocrinology ecology and evolution Evolutionary developmental biology also known as evo devo or EDB seeks to find links between development and evolution by opening the black box of development's role in evolution and in the evolution of developmental mechanisms In particular this volume emphasizes the roles of the environment and of hormonal signaling in evo devo It brings together a group of leading researchers to analyze the dynamic interaction of environmental factors with developmental and physiological processes and to examine how environmental signals are translated into phenotypic change from the molecular and cellular level to organisms and groups of organisms Taken together these chapters demonstrate the crucial roles of those processes of genetic developmental physiological and hormonal change that underpin evolutionary change in development morphology physiology behavior and life history Part I investigates links between environmental signals and developmental processes that could be preserved over evolutionary time Several contributors evaluate the work of the late Ryuichi Matsuda especially his emphasis on the role of the external environment in genetic change and variability pan environmentalism Other contributors in part I analyze different aspects of environmental genetic evolutionary linkages including the importance of alternate ontogenies in evolution and the paradox of stability over long periods of evolutionary time Part II examines the plasticity that characterizes much of development with contributors discussing such topics as gene regulatory networks and heterochronicity Part III analyzes the role of hormones and metamorphosis in the evolution of such organisms with alternate life history stages as lampreys amphibians and insects
