Growth Regulation Of Animal Population:

Growth and Regulation of Animal Populations Lawrence B. Slobodkin, 1980 **Natural Regulation of Animal Populations** McLaren, **Natural Regulation of Animal Populations** Ian A. McLaren, 2017-07-05

Surveying an area dense with conflicting observations and ideas this volume vividly depicts the current state of knowledge as well as the great diversity of opinion in the field of population ecology Ten papers by outstanding authorities focus on three main issues the effects of environment and population density on population dynamics the influence of animal behavior on population growth and the possibilities of genetic feedback or short term evolutionary change on control of animal populations An incisive introduction by the editor establishes a frame of reference and supplies succinct resolutions of some of the important controversies dealt with in these pages **Animal Growth Regulation** Dennis R. Campion, Gary J. Hausman, Roy J. Martin, 2013-11-11

The biotechnological advances of recent years have put us on the brink of unprecedented gains in animal productivity Manipulation of animal growth rate and composition of gain is now possible by a variety of techniques Examples include ingestion of beta adrenergic agonists injection of somatotropin castration immunization and gene insertion

Animal Growth Regulation addresses modern concepts of growth regulation with an emphasis on agriculturally important animals This emphasis is not exclusive as many situations exist in which the only information available was generated in other species and this information has been included for the sake of clarity and completeness However because of the overall orientation of this volume particular attention has been given to the regulation of skeletal muscle adipose tissue and bone growth Certain hormones and growth factors have a profound influence on growth regulation and this basic physiological knowledge is being harnessed to manipulate growth Thus considerable emphasis has been given to growth hormone somatomedin/insulin-like growth factor regulation of cell and tissue growth The involvement of peptides coded by protooncogenes and of negative growth regulators such as transforming growth factor β represents an emerging area of molecular biology wherein basic knowledge offers potential exploitation for growth manipulation Opportunities also exist for regulation of protein turnover especially from the standpoint of protein degradation Therefore a place was reserved for these topics in order to provide relevant basic knowledge

Demographic Anthropology Mr. Rohit Manglik, 2023-06-23

Population dynamics in anthropology are covered Guides students to analyze demographic trends fostering expertise in human populations through statistical methods and theoretical study **Animal Population Ecology** J Dempster, 2012-12-02

Animal Population Ecology focuses on the interaction between the various factors that affect an animal population Population ecology is the study of the factors that determine the abundance of species and is concerned with the identification and mode of action of those environmental factors that cause fluctuations in population size and of those which determine the extent of these fluctuations Organized into 11 chapters the book initially examines some of the basic ideas about animal populations and defines many of the terms used by population ecologists Then it describes the action of the most important factors affecting

population size The interaction between these factors is demonstrated in chapters 8 and 9 wherein the results from studies of a few selected species are presented in detail Finally chapters 10 and 11 cover the development of generalized theories of population dynamics and their application to practical problems With a strong focus on intensive study of animal populations in the field rather than elaborate theories the book will be helpful to population ecologists animal researchers teachers and students Size-Structured Populations Bo Ebenman,Lennart Persson,2012-12-06 At last both ecology and evolution are

covered in this study on the dynamics of size structured populations How does natural selection shape growth patterns and life cycles of individuals and hence the size structure of populations This book will stimulate biologists to look into some important and interesting biological problems from a new angle of approach concerning life history evolution intraspecific competition and niche theory structure and dynamics of ecological communities **Medical and Health Related Sciences**
