Growth Factors And The Cardiovascular System:

Growth Factors and the Cardiovascular System P. Cummins, 2012-12-06 Nature is totally amoral There are at least 34 million people in France alone who suffer from arterial hypertension and whose cardiovascular system is submitted day and night to both a haemodynamic and hormonal stress In all cases the vasculature hypertrophies as does the myocardium This growth process is obviously mainly detrimental at the outset since it lowers compliance of the arteries and makes them stiffer In contrast myocardial hypertrophy is initially beneficial since the growth process multiplies the number of contractile units and by so doing improves external work In addition according to Starling's law wall stress is lowered Growth factors play a major role in this amoral process as a trigger for hypertrophy at the vascular level and very likely at the level of the myocardium Another major point of interest is the role of growth factors as determinants of restenosis after angioplasty and also of atherogenesis Several chapters in this book are directly or indirectly concerned with this problem which is far from being purely academic since several groups are currently trying to control these processes by gene transfer Certainly one of the major clinical questions arising from such studies is why restenosis is not more frequent in clinical practice After de endothelialization the biologist would predict on the basis of recent studies on growth factors and in contrast with current clinical opinion that hypertrophy would occur in all cases with more or less complete restenosis

Development of Cardiovascular Systems Warren W. Burggren, Bradley B. Keller, 1997 This volume is a unique overview of cardiovascular development from the cellular to the organ level across a broad range of species The first section focuses on the molecular cellular and integrative mechanisms that determine cardiovascular development The second section has eight chapters that summarize cardiovascular development in invertebrate and vertebrate systems The third section discusses the effects of disease and environmental and morphogenetic influences on nonmammalian and mammalian cardiovascular development It includes strategies for the management of congenital cardiovascular malformations in utero and postnatally

Multicellularity in the Cardiovascular System Paolo Madeddu, Gabor Foldes, 2019-03-25 **Signal Transduction in the Cardiovascular System in Health and Disease** Ashok K. Srivastava, Madhu B. Anand-Srivastava, 2008-09-20 Signal Transduction in Cardiovascular System Health and Disease highlights the major contributions of different signaling systems in modulating normal cardiovascular functions and how a perturbation in these signaling events leads to abnormal cell functions and cardiovascular disorders This title is volume 3 in the new Springer series Advances in Biochemistry in Health and Disease

Cardiovascular Hormone Systems Michael Bader, 2008-12-17 Edited by a renowned scientist in the field with more than 200 high profile scientific publications to his name this is the first book to provide a comprehensive overview of all cardiovascular hormone systems Clearly structured the text covers steroid and peptide hormones amines and arachidonic acid metabolites as well as such others as nucleotides nitric oxide and acetylcholine An essential reference for researchers working on the cardiovascular system and related diseases

Angiogenesis and Cardiovascular Disease J.

Anthony Ware, Michael Simons, 1999 *Angiogenesis and Cardiovascular Disease* provides a comprehensive review of the basic scientific and clinical advances in the field of angiogenesis and its role in the human cardiovascular system. The material presented draws from multiple disciplines integrating information in a single source. Topics addressed focus first on aspects of development and normal biology of the vasculature and then on angiogenesis and how it is involved in the pathophysiology and therapy of ischemic cardiovascular disease. Vascular development, endothelial cell biology, the vascular matrix, and growth factors are discussed. Up to date information on current clinical trials and practical advice concerning application to cardiovascular therapeutic options are also stressed.

Gene Transfer in the Cardiovascular System Keith L.

March, 2012-12-06 The goal of gene transfer is protein expression, a process brought about by the insertion of a gene coding for a foreign protein into target cells, resulting in the synthesis of the foreign protein. For gene therapy, a transferred therapeutic gene must be expressed at a level beneficial for the patient. This chapter provides an introductory overview of the rapidly evolving field of non-viral approaches for gene delivery to mammalian cells. Although currently there are fewer ongoing clinical trials using non-viral approaches than those using viral-based systems, the number of non-viral trials is increasing. The long range goal of some research groups is the development of a genetically engineered artificial virus targeted to specific cells in the human body. An annual conference organized by Cambridge Healthtech Institute entitled Artificial Self Assembling Systems for Gene Transfer brings together researchers interested in this field. 1. Assembly of an artificial virus is very complex; other research groups aim to develop simpler delivery systems consisting of a plasmid combined with delivery agents. Viral-based systems are very successful for gene delivery but despite their successes, viral-based systems have some general limitations and system-specific limitations. When employing a viral-based system the following limitations should be considered: size limitation of the inserted gene due to packaging constraints; e.g. adenovirus, retrovirus; potential tumorigenesis; e.g. retrovirus; potential for insertional mutagenesis; greater than plasmid-based systems; potential immunogenicity; e.g.

Pathophysiology and Pharmacotherapy of Cardiovascular Disease Gowraganahalli

Jagadeesh, Pitchai Balakumar, Khin Maung-U, 2015-05-06 The present book covers the basic principles of cardiovascular physiology, pathophysiology, and advanced pharmacology with particular emphasis on cellular mechanisms of drug action. It provides an update on the progress made in several aspects of cardiovascular diseases so that it might kindle scientists and clinicians alike in furthering basic and translational research. In addition, the book is expected to fill imperative gaps in understanding and optimally treating cardiovascular disease.

Granata,J. Isgaard,2014-06-13 Most endocrine diseases if not treated or controlled have cardiovascular manifestations Both GH deficiency and GH excess impair cardiovascular functions e g in patients with acromegaly who have a shortened life expectancy and increased mortality mostly due to cardiovascular complications in uncontrolled disease Moreover Cushing s syndrome and diabetes are well known for metabolic and cardiovascular manifestations as well as hypo and hyperthyroidism Both adipose tissue and the heart have been increasingly recognized as organs with partially endocrine functions which produce adipokines and brain natriuretic peptide respectively and influence a number of cardiovascular parameters Primary aldosteronism as a cause for secondary hypertension is still a great challenge to detect and diagnose properly however new important discoveries have been made regarding the genetics of this probably underestimated cause of hypertension Written by distinguished researchers in their respective fields this book will give both researchers and clinicians an excellent update on all these topics as well as provide insight into the use of hormones as treatment tools in more controversial areas

Diabetes, Hypertension and Cardiovascular Diseases Soo-Kyoung Choi,Modar Kassan,Asunción Morán

Morán,2021-12-29 Diabetes and Cardiovascular Disease Michael T. Johnstone,Aristidis Veves,2007-10-28 The cause of diabetes mellitus is metabolic in origin However its major clinical manifestations which result in most of the morbidity and mortality are a result of its vascular pathology In fact the American Heart Association has recently stated that from the point of view of cardiovascular medicine it may be appropriate to say diabetes is a cardiovascular disease 1 But diabetic vascular disease is not limited to just the macrovasculature Diabetes mellitus also affects the microcirculation with devastating results including nephropathy neuropathy and retinopathy Diabetic nephropathy is the leading cause of end stage renal disease in the United States while diabetic retinopathy is the leading cause of new onset blindness in working age Americans The importance of this text on Diabetes and Cardiovascular Disease is evident by the magnitude of the population affected by diabetes mellitus Over 10 million Americans have been diagnosed with diabetes mellitus while another 5 million remain undiagnosed The impact from a public health perspective is huge and increasing As the population of the United States

grows older more sedentary and obese the risk of developing diabetes and its complications will increase Epidemiological studies have identified diabetes mellitus as a major independent risk factor for cardiovascular disease Over 65% of patients with diabetes mellitus die from a cardiovascular cause The prognosis of patients with diabetes mellitus who develop overt clinical cardiovascular disease is much worse than those cardiovascular patients free of diabetes mellitus **Hypertensive disorders of pregnancy and the cardiovascular system: Causes, consequences, prevention and therapy** Edoardo Sciatti,Federico Prefumo,Rossana Orabona,Chahinda Ghossein-Doha,2023-04-27
