Management of Wetlands Donald D. Hook, 1988 The ecology and management of African wetland vegetation Patrick Denny, 2012-12-06 Interest in the biology of African wetlands was initiated in the last century with the hypothesis that Lake Tanganyika was once part of a Jurassic sea and was furthered by Cunningham's expedition at the beginning of this century which proved that it was not. In the late 1920s ecological studies encouraged by the growing importance of inland fisheries were started by British, French and Belgian biologists. Some twenty years later several government limnological research centres and fishery departments were established in tropical Africa and scientific progress was accelerated. Scientific collaboration between the regions south of the Sahara was started formally in 1951 by the Scientific Council for Africa and stimulated by the International Biological Programme 1964-74 with its emphasis on biological productivity. Some of its interests were taken on by SCOPE which recently selected continental wetlands as a Special Project; hence this book. The five authors with Patrick Denny as editor have made a very valuable contribution both to science and to the management of Africa's natural resources; they have filled a gap in the synthesis of knowledge about Africa's environments which is long overdue. The term wetland is used today in several different contexts. For this purpose it excludes the seas and large open inland waters which are too deep for rooted plants but includes the huge areas of floodplains and dambos which may change seasonally from standing water to very dry lands.

Northern Forested Wetlands Ecology and Management Carl C. Trettin, 2018-12-19 Forested wetlands are a major component of northern landscapes important both for their ecological functions and their socioeconomic values. Historically these lands have been used for timber and fiber products, hunting, fishing, trapping, food gathering and recreation. There are many questions about the use and management of these lands in the future, particularly with respect to forest products, hydrology and water quality, plant and wildlife ecology, landscape dynamics and wetland restoration. *Northern Forested Wetlands Ecology and Management* provides a synthesis of current research and literature. It examines the status, distribution and use of these wetland resources. The book focuses on understanding the role of wetlands in the landscape and on how to manage these wetlands and sustain their important functions. This is a primary reference text for the study and management of northern forested wetlands, providing a forum for information discovered by researchers and managers from many nations.

Wetlands of the World I: Inventory, Ecology and Management Dennis F. Whigham, D. Dykxjová, S. Hejný, 1993-03-31 This work deals with the distributions of wetlands, the description of wetland types, wetland classification systems, ecological characteristics, primary forcing functions which are responsible for the development and persistence of the wetlands, wetland use and conservation and recommendations on what should be done for each type of wetland.

Wetland Ecosystems William J. Mitsch, James G. Gosselink, Li Zhang, Christopher J. Anderson, 2009-04-13 New focused text introduces readers to wetland ecosystems and systems approaches to studying wetlands. With its comprehensive coverage of wetland science, management and restoration, Mitsch and Gosselink's *Wetlands* has been the premier reference on wetlands for more than two decades. Now the coverage of

specific wetland ecosystem types from earlier editions of this acclaimed work has been updated revised and supplemented with additional content in order to create this new text focusing exclusively on wetland ecosystems This book now complements *Wetlands Fourth Edition* Following an introduction to ecosystems in general and wetland ecosystems in particular *Wetland Ecosystems* examines the major types of wetlands found throughout the world coastal wetlands freshwater marshes and forested swamps and peatlands The final chapter reviews three fundamental systems approaches to studying wetlands mesocosms full scale experimental ecosystems and mathematical modeling This new text features Updated descriptions of the hydrology biogeochemistry and biology of the main types of wetlands found in the world New content introducing general ecosystems wetland ecosystems whole ecosystem and mesocosm experiments with wetlands and systems ecology and modeling A detailed description of the ecosystem services provided by wetlands A broad international scope including many examples of wetlands located outside North America Two new coauthors offering new perspectives and additional insights into the latest ecosystem and modeling techniques An abundance of illustrations helps readers understand how different biological communities and the abiotic environment in wetland ecosystems interact and function Tables and text boxes provide at a glance summaries of key information Lastly each chapter concludes with a list of recommended readings This text has been designed as an introduction for students and professionals in wetland ecology and management general ecology environmental science and natural resource management
