*Handbook on the Economics of Renewable Energy* Pablo del Río, Mario Ragwitz, 2023-07-01 Renewable energy technologies produce many measurable benefits such as a clear reduction in greenhouse gas emissions However it is also

apparent that these methods of energy production come with costs. Discussing renewable energy developments within an economic context, this pertinent Handbook provides a comprehensive view of the present and future dimensions of renewable energy use. The Power Supply Industry Panos Konstantin, Margarete Konstantin, 2018-01-11. Power and Energy industry is a highly capital intensive business field. Furthermore, there is a very close interlinkage between technologies and economics that requires engineering consultants, economists, and lawyers dealing with investments in this field to have a basic knowledge of the power sector technologies and a common understanding of project evaluation approaches and methodologies. The book's overall objective is to provide a comprehensive but concise coverage of power supply technologies and the related economics as required for techno-economic evaluation of investments in power and business projects. Throughout the book, the emphasis is on transferring practical know-how rather than pure theoretical knowledge. This is also demonstrated in numerous examples derived from experience of respective projects. The book comprises eleven chapters, 35 tables, 100 figures, 35 application examples, and 10 case studies. Target audience of the book are primarily international consultants, staff members of engineering companies, utility personnel, energy economists, and lawyers, as well as employees of government agencies entrusted with regulating the energy and utility sector, and finally students in related fields of engineering and economics. *Financing of Energy Sector in Developing Countries* Pradeep Chaturvedi, 1999.

**International Seminar On Nuclear War And Planetary Emergencies - 34th Session** Richard C Ragaini, 2006-03-20. Since its inception in 1981, the Erice Seminars from which this book series originates have attracted the attention of world leaders in science, technology, and culture. This latest volume in the series covers a wide range of topics from energy studies and research to disarmament and cultural emergencies. In addition to the main topics, the book also includes an associated workshop program, the 33rd Session focusing on cultural emergencies, specifically designing and building in resilience against chemical, biological, and radiological attacks. **Power and Gas Asset Management** Miguel Moreira da Silva, 2020-01-01. This book offers meaningful insights into an impending challenge for the energy industry, namely the increasing role of asset management amongst the utilities' core operations. In the aftermath of energy digitalization, power and gas companies will be able to seize asset productivity through risk-based operation and maintenance and better balance capital and operational expenditures. By addressing the asset management of both power and gas infrastructures and by adopting a comprehensive approach including regulation and business models, as well as a solid technology background, this book offers a unique perspective on the energy utilities transformation journey and the road to optimal decision making for both asset portfolio expansion and replacement. The asset management end-to-end mission requires appropriate internal governance depending on the business framework and the development of decision aid models for asset replacement and maintenance supported on probabilistic risk and reliability indexes. This book advocates systematically digitalizing the power and gas assets, addressing both data governance and infrastructure alongside real-time equipment condition monitoring. It

also provides a meaningful methodology for designing data centric asset management and predictive operation and maintenance using artificial intelligence and engineering based approaches As such it provides valuable strategy methods and models illustrated by case studies and proofs of concept for a wide range of stakeholders including utilities and industry professionals regulators policy makers researchers and students
