The Economics of Space Sustainability

Delivering Economic Evidence to Guide Government Action OECD, 2024-06-28 Earth's orbits are polluted by more than 100 million debris objects that pose a collision threat to satellites and other spacecraft. The risk of perturbing highly valuable space-based services critical to life on Earth such as weather monitoring and disaster management is making debris mitigation an urgent policy challenge. This book provides the latest findings from the OECD project on the economics of space sustainability which aims to improve decision makers' understanding of the societal value of space infrastructure and costs of space debris. It provides comprehensive evidence on the growth of space debris, presents methods to evaluate and quantify the value of the satellites at risk and discusses ways to ensure a more sustainable use of the orbital environment. It notably includes case studies from Italy, Japan and Korea on the socio-economic value of different types of space infrastructure and discusses the feasibility and optimal design of fiscal measures and voluntary environmental rating schemes to change operator behaviour. This work is informed by contributions from researchers worldwide involved in the OECD project.

Instructor's Manual to Accompany Economics in Action: an Applications Book, Microeconomics in Action: an Applications Book and Macroeconomics in Action: an Applications Book Beverly J. Cameron, Norman E. Cameron, 1984 Organisations in Action Peter A. Clark, 2000 This original and ambitious work provides a fascinating examination of organizations from both a post-modern and new organizational economics perspective. Combining strategy, international business and organisational theory, it represents a ground-breaking critique of prevailing mainstream modernist theories of organization. Distinctive features include a comprehensive analysis of social and organizational theory, discussion and exploration of knowledge capitalism, a critique of core competencies and resource-based approaches to strategy, human resource management and organizational behaviour. In an essential area of study for every business undergraduate and reflective manager, this outstanding book pulls together material which is currently scattered and poorly synthesised and examines high-profile real-world business examples. **Application of the Recommendations of the International Economic Conference** League of Nations. Principles of Economics, with Applications to Practical Problems Frank Albert Fetter, 1910 Integrated Management of Insect Pests on Canola and Other Brassica Oilseed Crops Gadi V P Reddy, 2017-04-26 This book comprehensively reviews current pest management practices and explores novel integrated pest management strategies in Brassica oilseed crops. It is essential reading for pest management practitioners and researchers working on pest management in canola and other Brassica crops worldwide. Canola, mustard, camelina, and crambe are the most important oilseed crops in the world. Canola is the second largest oilseed crop in the world, providing 13% of the world's supply. Seeds of these species commonly contain 40% or more oil and produce meals with 35 to 40% protein. However, its production has declined significantly in recent years due to insect pest problems. The canola pest complexes are responsible for high insecticide applications on canola. Many growers rely on calendar-based spraying schedules for insecticide applications. The diamondback moth *Plutella xylostella* and flea beetles *Phyllotreta* spp. *P. cruciferae* and *P. striolata* cause serious damage to canola. In the Northern Great Plains USA, for instance, *P. xylostella* is now recorded everywhere that canola is grown. Severe damage to canola plants can be caused by overwintering populations of flea beetles feeding on newly emerged seedlings. Cabbage seed pod weevil *Ceutorhynchus obstrictus*, swede midge *Contarinia nasturtii*, and tarnished plant bug *Lygus lineolaris* are also severe pests on canola. Minor pests include aphids, cabbage aphid *Brevicoryne brassicae*, and turnip aphid *Hyadaphis erysimi* and grasshopper *Melanoplus sanguinipes*.

Smart Energy Research. At the Crossroads of Engineering, Economics, and Computer Science Christian Derksen, Christoph Weber, 2017-08-29 This volume consists of revised selected papers presented at the 3rd and 4th International Conference on Smart Energy Research SmartER Europe 2016 and 2017 held in Essen, Germany, in February 2016 and 2017. The 13 full papers included in this volume were carefully reviewed and selected from 25 submissions. The papers discuss recent advances and experiences in building and using new IT-based solutions for Smart Grids and Smart Markets, combining the knowledge of different disciplines such as engineering, business management, and economics, as well as computer science. They reflect the versatility and the complexity of the transformation process in the energy sector and also show the great need for research that is required to achieve the high targets for a digitized and sustainable energy landscape.

Economics for Everyone Jim Stanford, 2015-06-20 Economics is too important to be left to the economists. This book provides the information you need to understand how capitalism works and how it doesn't. Through clear, bite-sized chapters interspersed with illuminating illustrations, this is an antidote to the abstract and ideological way that economics is normally taught and reported on in the media. Key concepts such as finance, competition, and wages are explored, and their importance to everyday life is revealed. It answers questions such as: Do workers need capitalists? Why does capitalism harm the environment? and What really happens on the stock market? The book is supported with a comprehensive set of web-based course materials, including videos for popular economics courses.
