point was the basic innovation digitization Production as well as application of information and communications technologies ICT are based on this principle At the beginning of the seventies the first microprocessor was produced Some ten years later the first personal computer was brought onto the market The commercial use of the Internet has begun in the mid nineties In view of the economic boom in the U S accompanying the introduction of the Internet the question arises as to what extent the new economy actually has exerted lasting positive effects on productivity not only in the United States but also worldwide Inspired by these developments the Federal Ministry of Economics and Technology commissioned RWI Essen to study the driving forces of the new economy In this report the trends of the ICT sector and of the use of ICT products are analyzed with respect to the overall economic effects in Germany in comparison to the U S Further analyses were carried out regarding the intensity and effects of e business Finally the influence of different methods of price measurement on productivity was analysed since this is important for international comparisons of total factor productivity The study culminates in a growth accounting calculation separating the contributions to economic growth by capital labor and technological progress

The Microfoundations Delusion John Edward King,2012-01-01 This excellent book documents the creation of what has become the first commandment of orthodox macroeconomics that microeconomic theory provides its foundation because this is the most secure form of economic knowledge By contrast John King shows conclusively that microeconomics cannot play such a role when assessed by the criteria of logic or of science or of economics itself Indeed he goes further and demonstrates that the microfoundations dogma detracts from knowledge about how economies actually operate and instead generates patently false conclusions Moreover the dogma is shown to have blinded orthodox economists from even seeing the possibility of typical macroeconomic crises and has disarmed them in formulating policies that would eliminate actual crises The book therefore deals with a topic at the very heart of the present debacle in the world economy \_

Michael Howard University of Waterloo Canada A generation ago Dudley Dillard wrote a famous article on the barter illusion in classical and neoclassical economics Now John King has gone a step further and written about the microfoundations

delusion The illusion has been with us for a very long time the delusion is of more recent vintage Together they have blocked a basic understanding of macroeconomic and monetary phenomena at a time when they are most urgently needed This is a book that had to be written and we are fortunate that it is John King who has written it Essential reading for our times \_ John Smithin York University Canada In this challenging book John King makes a sustained and comprehensive attack on the dogma that macroeconomic theory must have rigorous microfoundations He draws on both the philosophy of science and the history of economic thought to demonstrate the dangers of foundational metaphors and the defects of micro reduction as a methodological principle Strong criticism of the microfoundations dogma is documented in great detail from some mainstream and many heterodox economists and also from economic methodologists social theorists and evolutionary biologists The author argues for the relative autonomy of macroeconomics as a distinct special science cooperating with but most definitely not reducible to microeconomics The Microfoundations Delusion will prove a stimulating and thought provoking read for scholars students and researchers in the fields of economics heterodox economics and history of economic thought
