Ecosystem Management For Parks And Wilderness:

Ecosystem Management for Parks and Wilderness James K. Agee, Darryll R. Johnson, 1988 The need for cooperation among government agencies as well as an interdisciplinary approach to the increasingly challenging and complicated problem of managing park and wilderness areas prompted the University of Washington College of Forest Resources the National Park Service and the Forest Service to sponsor an ecosystem management workshop for scientists planners and managers To develop an improved conceptual approach to managing change in ecosystems crossing natural and political boundaries the workshop focused on defining terms uncovering areas of misunderstanding and barriers to cooperation and developing methods to determine the most important problems and issues Three needs emerged from the prioritization process a precise definition of the management objectives for park and wilderness lands and how to integrate them with objectives for surrounding lands nationally as well as site specific more information about physical biological and social components of park and wilderness ecosystems from both sides of political boundaries and key indicators of ecosystem condition as well as methods for evaluating management effectiveness All of these common themes point to a need for more precise direction in management goal setting and more accurate assessment of progress toward goals The book includes an introductory chapter by the editors and summary in which they outline a direction for ecosystem management in the next critical decades The other chapters by individual contributors include studies on laws governing park and wilderness lands paleoecological records that reveal the historic effects of climatic variations on vegetation change succession and natural disturbance in relation to the problems of what can and should be preserved managing ecosystems for large populations of vertebrates the management of large carnivores effects of air pollution lake acidification human ecology and environmental management the role of economics cooperation in ecosystem management and management challenges in Yellowstone National Park [Ecosystem Management for Parks and Wilderness](#) James K. Agee, Darryll R. Johnson, 1988 *Ecosystem Management for Parks and Wilderness* University of Washington. College of Forest Resources, 1988 **Beyond Naturalness** David N. Cole, Laurie Yung, 2012-06-22 The central concept guiding the management of parks and wilderness over the past century has been naturalness to a large extent the explicit purpose in establishing these special areas was to keep them in their natural state But what does that mean particularly as the effects of stressors such as habitat fragmentation altered disturbance regimes pollution invasive species and climate change become both more pronounced and more pervasive Beyond Naturalness brings together leading scientists and policymakers to explore the concept of naturalness its varied meanings and the extent to which it provides adequate guidance regarding where when and how managers should intervene in ecosystem processes to protect park and wilderness values The main conclusion is the idea that naturalness will continue to provide an important touchstone for protected area conservation but that more specific goals and objectives are needed to guide stewardship The issues considered in Beyond Naturalness are central not just to

conservation of parks but to many areas of ecological thinking including the fields of conservation biology and ecological restoration and represent the cutting edge of discussions of both values and practice in the twenty first century This book offers excellent writing and focus along with remarkable clarity of thought on some of the difficult questions being raised in light of new and changing stressors such as global environmental climate change

Ecosystem Management for Parks and Wilderness James K. Agee, 1988 Science and Ecosystem Management in the National Parks William L. Halvorson, Gary E. Davis, 2023-01-10 Our national parks are more than mere recreational destinations They are repositories of the nation's biological diversity and contain some of the last ecosystem remnants needed as standards to set reasonable goals for sustainable development throughout the land Nevertheless public pressure for recreation has largely precluded adequate research and resource monitoring in national parks and ignorance of ecosystem structure and function in parks has led to costly mistakes such as predator control and fire suppression that continue to threaten parks today This volume demonstrates the value of ecological knowledge in protecting parks and shows how modest investments in knowledge of park ecosystems can pay handsome dividends Science and Ecosystem Management in the National Parks presents twelve case studies of long term research conducted in and around national parks that address major natural resource issues These cases demonstrate how the use of longer time scales strongly influence our understanding of ecosystems and how interpretations of short term patterns in nature often change when viewed in the context of long term data sets Most importantly they show conclusively that scientific research significantly reduces uncertainty and improves resource management decisions Chosen by scientists and senior park managers the cases offer a broad range of topics including air quality at Grand Canyon interaction between moose and wolf populations on Isle Royale control of exotic species in Hawaiian parks simulation of natural fire in the parks of the Sierra Nevada and the impact of urban expansion on Saguaro National Monument Because national parks are increasingly beset with conflicting views of their management the need for knowledge of park ecosystems becomes even more critical not only for the parks themselves but for what they can tell us about survival in the rest of our world This book demonstrates to policymakers and managers that decisions based on knowledge of ecosystems are more enduring and cost effective than decisions derived from uninformed consensus It also provides scientists with models for designing research to meet threats to our most precious natural resources If we can learn to save the parks observe Halvorson and Davis perhaps we can learn to save the world
