Introducing Evangelical Ecotheology Daniel L. Brunner, Jennifer L. Butler, A. J. Swoboda, 2014-10-14 Today's church finds itself in a new world one in which climate change and ecological degradation are front page news In the eyes of many the evangelical community has been slow to take up a call to creation care How do Christians address this issue in a faithful way This evangelically centered but ecumenically informed introduction to ecological theology ecotheology explores the global dimensions of creation care calling Christians to meet contemporary ecological challenges with courage and hope The book provides a biblical theological ecological and historical rationale for earthcare as well as specific practices to engage both individuals and churches Drawing from a variety of Christian traditions the book promotes a spirit of hospitality civility honesty and partnership It includes a foreword by Bill McKibben and an afterword by Matthew Sleeth [The Economics of Ecosystems and Biodiversity in Local and Regional Policy and Management](#) Heidi Wittmer, Haripriya Gundimeda, 2012-05-23 In this volume of the TEEB The Economics of Ecosystems and Biodiversity publication series the key concepts of the project are applied to local and regional policy and public management The aim is to show that by taking nature's benefits into account decision makers can promote local development to ensure human well being and economic growth and stability while maintaining environmental sustainability The book explores the potential for local development provided by an approach based on nature It offers examples of successful implementation of this approach from across the world highlighting the importance of local decision making in management and planning It provides tools and practical guidance for reform and throughout the volume the economic benefits of environmental consideration at a local level are expounded This book is intended to offer inspiration and practical suggestions for the improvement and sustainable management of the environment and human well being The local aspect of this book complements the focus of the previous three volumes completing the set to provide a comprehensive approach to simultaneously improving and maintaining economic and environmental stability as well as human well being [One Welfare](#) Rebeca Garcia Pinillos, 2018-06-18 Contemporary and thought provoking this book provides a definition of the concept of One Welfare the interconnection between animal welfare human wellbeing and the environment The book establishes a conceptual framework in five sections resulting from a three month global consultation on a draft proposal comprising nine areas One Welfare complements the One Health and Eco Health approaches enabling full integration of animal welfare within other disciplines a much needed tool to help improve animal welfare human wellbeing and environmental components and support worldwide sustainable development goals Integrating this concept into existing projects could help to foster collaboration to improve human and animal welfare globally This text is of interest to those working in the fields of animal and human welfare sustainability and conservation

international development and to all those keen to extend the one health approach to animal welfare and human wellbeing

Climate Change Impacts on Tropical Forests in Central America Aline Chiabai, 2015-09-25 The loss of biodiversity is a major environmental problem in nearly every terrestrial ecosystem on Earth This loss is accelerating driven by climate change as well as by other causes including agricultural exploitation fragmentation and degradation triggered by land use changes The crucial issue under debate is the impact on the welfare of current and future population and the role of humans in the exploitation of natural resources This is of particular importance in Central America which it is amongst the richest and most threatened biodiversity regions on the Earth and where the loss of ecosystems strongly affects its socio economic vulnerability This book addresses the impacts of climate and land use change on tropical forest ecosystems in this important region and assesses the expected economic costs if no policy action is taken under different future scenarios and for different geographical scales This innovative collection utilises both theoretical approaches and empirical results to provide a conceptual framework for an integrated analysis of climate and land use change impacts on forest ecosystems and related economic effects offering insight into the complex relationship between ecosystems and benefits to humans This important contribution to forest ecosystems and climate change provides invaluable reading for students and scholars in the fields of environmental and ecological economics environmental science and forestry natural resource management agriculture and climate change

Ecosystem Services in Patagonia Pablo L. Peri, Guillermo Martínez Pastur, Laura Nahuelhual, 2021-04-29 This book aims to quantify and discuss how societies have directly and indirectly benefited from ecosystem services in Patagonia not only in terms of provisioning and cultural services but also regulating and supporting services Patagonia a region that stretches across two countries ca 10% in Chile and 90% in Argentina is home to some of the most extensive wilderness areas on our planet Natural grasslands comprise almost 30% of the Americas including the Patagonian steppe while Patagonian southern

temperate forests are important for carbon sequestration and storage play a pivotal role in water regulation and have become widely recognized for their ecotourism value However profound changes are now underway that could affect key ecosystem functions and ultimately human well being In this context one major challenge we face in Patagonia is that ecosystem services are often ignored in economic markets government policies and land management practices The book explores the synergies and trade offs between conservation and economic development as natural landscapes and seascapes continue to degrade in Patagonia Historically economic markets have largely focused on the provisioning services forest products livestock while neglecting the interdependent roles of regulating services erosion and climate control supporting services nutrient cycling and cultural services recreation local identity tourism Therefore the present work focuses on ecosystem functions and ecosystem services as well as on trends in biodiversity and the interactions between natural environments and land use activities throughout Patagonia

Human Psychology and the Destruction of the Planet Thierry Ripoll,2025-09-30 This book sheds light on the reasons for our inaction in matters of the environmental crisis and presents solutions to address the crisis The work draws on numerous disciplinary fields such as psychology neuroscience anthropology biology philosophy sociology economics ethology The author argues that it is not possible to correctly understand the current environmental crisis in the light of a single discipline and emphasizes the importance of cognitive sciences to address the environmental crisis He shows that the reasons for human inaction relate as much to the characteristics of our psyche brain as to those of the consumption society that we invented and have lived in at least since the Neolithic The analysis presented stresses the need to regulate individual behavior and to call into question our consumption patterns Without questioning the characteristics of both modern society and the way our brains work will make it impossible to resolve the environmental crisis This book proposes a revolutionary change of the way we live and act to preserve the planet

Marine Biodiversity and Ecosystem Functioning Martin Solan,Rebecca J. Aspden,David M. Paterson,2012-07-19 The biological composition and richness of most of the Earth s major ecosystems are being dramatically and irreversibly transformed by anthropogenic activity Yet despite the vast areal extent of our oceans the mainstay of research to date in the biodiversity ecosystem functioning arena has been weighted towards ecological observations and experimentation in terrestrial plant and soil systems This book provides a framework for extending these concepts to a variety of marine systems Marine Biodiversity and Ecosystem Functioning is the first book to address the latest advances in biodiversity function science using marine examples It brings together contributions from the leading scientists in the field to provide an in depth evaluation of the science before offering a perspective on future research directions for some of the most pressing environmental issues facing society today and in the future

Physical Geography Rebecca Lave, Christine Biermann, Stuart N. Lane, 2018-04-04 This handbook is recognition of the need to better integrate physical and human geography. It combines a collection of work and research within the new field of Critical Physical Geography which gives critical attention to relations of social power with deep knowledge of a particular field of biophysical science. Critical Physical Geography research accords careful attention to biophysical landscapes and the power relations that have increasingly come to shape them and to the politics of environmental science and the role of biophysical inquiry in promoting social and environmental justice. The Palgrave Handbook of Critical Physical Geography lays out the scope and guiding principles of Critical Physical Geography research. It presents a carefully selected set of empirical work demonstrating the range and intellectual strength of existing integrative work in geography research. This handbook is the first of its kind to cover this emerging discipline and will be of significant interest to students and academics across the fields of geography, the environment and sustainability.

Plastics and Environmental Sustainability Anthony L. Andrady, 2015-03-23 Surveys the issues typically raised in discussions of sustainability and plastics. Discusses current issues not covered in detail previously such as ocean litter, migration of additives into food products and the recovery of plastics. Covers post-consumer fate of plastics on land and in the oceans, highlighting the environmental impacts of disposal methods. Details toxicity of plastics, particularly as it applies to human health. Presents a clear analysis of the key plastic-related issues, including numerous citations of the research base that supports and contradicts the popularly held notions.

[Encyclopedia of Environmental Health](#), 2008-09-01 Environmental health has evolved over time into a complex multidisciplinary field. Many of the key determinants and solutions to environmental health problems lie outside the direct realm of health and are strongly dependent on environmental changes: water and sanitation, industrial development, education, employment, trade, tourism, agriculture, urbanization, energy, housing, and national security. Environmental risks, vulnerability, and variability manifest themselves in different ways and at different time scales. While there are shared global and transnational problems, each community, country, or region faces its own unique environmental health problems, the solution of which depends on circumstances surrounding the resources, customs, institutions, values, and environmental vulnerability. This work contains critical reviews and assessments of environmental health practices and research that have worked in places and thus can guide programs and economic development in other countries or regions. The Encyclopedia of Environmental Health Five Volume Set seeks to conceptualize the subject more clearly, to describe the best available scientific methods that can be used in characterizing and managing environmental health risks, to extend the field of environmental health through new theoretical perspectives and heightened appreciation of social, economic, and political contexts, and to encourage a richer analysis in the field through examples of diverse experiences in dealing with the health-environment interface. The Encyclopedia of Environmental Health contains numerous examples of policy options and environmental health practices that have worked and thus can guide programs in other countries or regions. It includes a wide range of tools and strategies that

can assist communities and countries in assessing environmental health conditions monitoring progress of intervention implementation and evaluating outcomes Provides a comprehensive overview of existing knowledge in this emerging field Articles contain summaries and assessments of environmental health practices and research providing a framework for further research Places environmental health in the broader context of environmental change and related ecological political economic social and cultural issues

Exploring Synergies and Trade-offs between Climate Change and the Sustainable Development Goals V. Venkatramanan, Shachi Shah, Ram Prasad, 2020-11-16 The existential environmental crisis prompted the United Nations to formulate the Millennium Development Goals at the turn of the 21st century in order to embark on an era of sustainable development The progress and deficiencies in achieving the Millennium Development Goals provided impetus to the intelligentsia and policymakers to map out the pertinent goals for a sustainable growth trajectory for humanity and the planet The United Nations 2030 Agenda for Sustainable Development which was adopted in September 2015 took the shape of 17 Sustainable Development Goals SDGs and 169 targets In effect the 17 Sustainable Development Goals focus on protecting the earth's life support systems for intra and inter generational equity and for development that is rooted in sustainability science Attaining these goals is an uphill task nevertheless scientific knowledge trans and interdisciplinary inquiries concerted global action and capacity building would provide an enabling environment for achieving the SDGs This book explores the synergies and trade offs between climate change management and other SDGs It highlights the policy imperatives as well as the interrelations between combating climate change and its impacts SDG 13 and food and nutritional security SDG 2 water security SDG 6 soil security SDG 15 energy security SDG 7 poverty eradication SDG 1 gender equality SDG 5 resilient infrastructure SDG 9 and sustainable and resilient cities SDG 11
