experience and is embedded within individuals. Sometimes the knowledge is gained through critical thinking, watching others and observing results of others. This implies that knowledge can be formed only after data which is generated through experience or observation is grouped into information and then this information pattern is made generic wisdom. However, dissemination and acceptance of this knowledge becomes a key factor in knowledge management. The knowledge pyramid represents the usual concept of knowledge transformations where data is transformed into information and information is transformed into knowledge. Methods and Tools for Effective Knowledge Life-Cycle-Management Alain Bernard, Serge Tichkiewitch, 2008-04-01. Knowledge Management is a wide critical and strategic issue for all the companies from the SMEs to the most complex organizations. The key of competitiveness is knowledge because of the necessity of reactivity, flexibility, agility and innovation capacities. Knowledge is difficult to measure itself but what is visible is the way of improving products, technologies and enterprise organizations. During the last four years, based on the experience of most of the best experts around the World CIRP, The International Academy for Production Engineering has decided to prepare and structure a Network of Excellence (NoE) proposal. The European Community accepted to found the VRL KCiP Virtual Research Laboratory Knowledge Community in Production. As its name indicates, the aim of this NoE was really to build a Knowledge Community in Production. This was possible and realistic because the partners were representative of the most important universities in Europe and also because of strong partnerships with laboratories far from Europe (Japan, Australia, South Africa, USA, etc.). Based on such powerful partnership, the main issue was to help European manufacturing industry to define and structure the strategic knowledge in order to face the strategic worldwide challenges. Manufacturing in Europe currently has two essential aspects: 1. It has to be knowledge intensive given the European demands for high tech products and services (e.g. electronics).
