Jones, Jayadev Misra, 2021-09-26 Sir Tony Hoare has had an enormous influence on computer science from the Quicksort algorithm to the science of software development concurrency and program verification His contributions have been widely recognised He was awarded the ACM's Turing Award in 1980 the Kyoto Prize from the Inamori Foundation in 2000 and was knighted for services to education and computer science by Queen Elizabeth II of England in 2000 This book presents the essence of his various works the quest for effective abstractions both in his own words as well as chapters

written by leading experts in the field including many of his research collaborators In addition this volume contains biographical material his Turing award lecture the transcript of an interview and some of his seminal papers Hoare s foundational paper An Axiomatic Basis for Computer Programming presented his approach commonly known as Hoare Logic for proving the correctness of programs by using logical assertions Hoare Logic and subsequent developments have formed the basis of a wide variety of software verification efforts Hoare was instrumental in proposing the Verified Software Initiative a cooperative international project directed at the scientific challenges of large scale software verification encompassing theories tools and experiments Tony Hoare s contributions to the theory and practice of concurrent software systems are equally impressive The process algebra called Communicating Sequential Processes CSP has been one of the fundamental paradigms both as a mathematical theory to reason about concurrent computation as well as the basis for the programming language occam CSP served as a framework for exploring several ideas in denotational semantics such as powerdomains as well as notions of abstraction and refinement It is the basis for a series of industrial strength tools which have been employed in a wide range of applications This book also presents Hoare s work in the last few decades These works include a rigorous approach to specifications in software engineering practice including procedural and data abstractions data refinement and a modular theory of designs More recently he has worked with collaborators to develop Unifying Theories of Programming UTP Their goal is to identify the common algebraic theories that lie at the core of sequential concurrent reactive and cyber physical computations

*Artificial Intelligence Today* Michael J. Wooldridge, Manuela Veloso, 2007-03-06 Artificial Intelligence is one of the most fascinating and unusual areas of academic study to have emerged this century For some AI is a true scientific discipline that has made important and fundamental contributions to the use of computation for our understanding of nature and phenomena of the human mind for others AI is the black art of computer science Artificial Intelligence Today provides a showcase for the field of AI as it stands today The editors invited contributions both from traditional subfields of AI such as theorem proving as well as from subfields that have emerged more recently such as agents AI and the Internet or synthetic actors The papers themselves are a mixture of more specialized research papers and authoritative survey papers The secondary purpose of this book is to celebrate Springer Verlag's Lecture Notes in Artificial Intelligence series

**Logic Program Synthesis and Transformation** Kung-Kiu Lau, Timothy P. Clement, 2013-03-09 Logic program synthesis and transformation are topics of central importance to the software industry The demand for software can not be met by the current supply in terms of volume complexity or reliability The most promising solution seems to be the increased automation of software production programmer productivity would improve and correctness could be ensured by the application of mathematical methods Because of their mathematical foundations logic programs lend themselves particularly well to machine assisted development techniques and therefore to automation This volume contains the proceedings of the second International Workshop on Logic Program Synthesis and Transformation LOPSTR 92 held at the University of Manchester 2 3 July 1992 The LOPSTR workshops are the only international meetings devoted to these two important areas A variety of new techniques were described at the workshop all of which promise to revolutionize the software industry once they become standard practise These include techniques for the transformation of an inefficient program into an equivalent efficient one and the synthesis of a program from a formal specification of its required behaviour Among the topics covered in this volume are optimal transformation of logic programs logic program synthesis via proof planning deductive synthesis of programs for query answering efficient compilation of lazy narrowing into Prolog synthesis of narrowing programs Logimix a self applicable partial evaluator for Prolog proof nets automatic termination analysis Logic Program Synthesis and Transformation describes the latest advances in machine assisted development of logic programs It will provide essential reading for researchers and postgraduate students concerned with these two important areas

**Constraints in Computational Logics: Theory and Applications** Hubert Comon, Claude Marche, Ralf Treinen, 2003-08-06 Constraints provide a declarative way of representing infinite sets of data They are well suited for combining different logical or programming paradigms as has been known for constraint logic programming since the 1980s and more recently for functional programming The use of constraints in automated deduction is more recent and has proved to be very successful moving the control from the meta level to the constraints which are now first class objects This monograph like book presents six thoroughly reviewed and revised lectures given by leading researchers at the summer school organized by the ESPRIT CCL Working Group in Gif sur Yvette France in September 1999 The book offers coherently written chapters on constraints and constraint solving constraint solving on terms combining constraint solving constraints and theorem proving functional and constraint logic programming and building industrial applications
