

ELECTROSHOCK: THE CASE AGAINST

BY JAMES M. HANCOCK, M.D.

Electroshock therapy is a procedure in which a patient is subjected to a controlled electric current to induce a seizure.

The procedure is used to treat a variety of mental disorders, including depression, bipolar disorder, and schizophrenia.

It is often used as a last resort when other treatments have failed.

Electroshock therapy is a controversial procedure, with some people arguing that it is effective and others arguing that it is dangerous.

The procedure is often used on patients who are unable to take medication or who are resistant to medication.
