The Messenger of Mathematics, 1886 **Annual Report of the Sheffield Scientific School of Yale College** Yale College. Sheffield Scientific School, 1869 **Mathematics Unbound** Karen Hunger Parshall, Adrian Clifford Rice, Although today's mathematical research community takes its international character very much for granted this global nature is relatively recent having evolved over a period of roughly 150 years from the beginning of the nineteenth century to the middle of the twentieth century During this time the practice of mathematics changed from being centered on a collection of disparate national communities to being characterized by an international group of scholars for whom the goal of mathematical research and cooperation transcended national boundaries Yet the development of an international community was far from smooth and involved obstacles such as war political upheaval and national rivalries Until now this evolution has been largely overlooked by historians and mathematicians alike This book addresses the issue by bringing together essays by twenty experts in the history of mathematics who have investigated the genesis of today's international mathematical community This includes not only developments within component national mathematical communities such as the growth of societies and journals but also more wide ranging political philosophical linguistic and pedagogical issues The resulting volume is essential reading for anyone interested in the history of modern mathematics It will be of interest to mathematicians historians of mathematics and historians of science in general Communicating Chemistry Anders Lundgren, Bernadette Bensaude-Vincent, 2000 Historians and philosophers of science offer 18 papers from a European Science Foundation workshop held in Uppsala Sweden in February 1996 explore such questions as how textbooks differ from other forms of chemical literature under what conditions they become established as a genre whether they develop a specific rhetoric how their audiences help shape the profile of chemistry translations and other topics Only names are indexed

their mathematical bases and finite element discretizations The complexity of the physical behaviors of shells is analysed and the difficulties to obtain uniformly optimal finite element procedures are identified and studied Some modern finite element methods are presented for linear and nonlinear analyses In this Second Edition the authors give new developments in the field and to make the book more complete more explanations throughout the text an enlarged section on general variational formulations and new sections on 3D shell models dynamic analyses and triangular elements The analysis of shells represents one of the most challenging fields in all of mechanics and encompasses various fundamental and generally applicable components Specifically the material presented in this book regarding geometric descriptions tensors and mixed variational formulations is fundamental and widely applicable also in other areas of mechanics Works Relating to Mathematics
