Handbook of Scheduling Joseph Y-T. Leung, 2004-04-27. Researchers in management industrial engineering operations and computer science have intensely studied scheduling for more than 50 years resulting in an astounding body of knowledge in this field. *Handbook of Scheduling Algorithms Models and Performance Analysis* the first

handbook on scheduling provides full coverage of the most recent and advanced topics on the subject. It assembles researchers from all relevant disciplines in order to facilitate cross fertilization and create new scheduling insights. The book comprises six major parts each of which breaks down into smaller chapters. Part I introduces materials and notation with tutorials on complexity theory and algorithms for the minimization of makespan, total completion time, dual objectives, maximum lateness, the number of late jobs and total tardiness. Part II is devoted to classical scheduling problems. Part III explores scheduling models that originate in computer science, operations research and management science. Part IV examines scheduling problems that arise in real time systems focusing on meeting hard deadline constraints while maximizing machine utilization. Part V discusses stochastic scheduling and queueing networks highlighting jobs that are not deterministic. Part VI covers applications discussing scheduling problems in airline process and transportation industries as well as in hospitals and educational institutions.

Scheduling in Supply Chains Using Mixed Integer Programming Tadeusz Sawik, 2011-08-08. A unified systematic approach to applying mixed integer programming solutions to integrated scheduling in customer driven supply chains. Supply chain management is a rapidly developing field and the recent improvements in modeling, preprocessing, solution algorithms and mixed integer programming MIP software have made it possible to solve large scale MIP models of scheduling problems, especially integrated scheduling in supply chains. Featuring a unified and systematic presentation, *Scheduling in Supply Chains Using Mixed Integer Programming* provides state of the art MIP modeling and solutions approaches, equipping readers with the knowledge and tools to model and solve real world supply chain scheduling problems in make to order manufacturing. Drawing upon the author's own research, the book explores MIP approaches and examples which are modeled on actual supply chain scheduling problems in high tech industries in three comprehensive sections. *Short Term Scheduling in Supply Chains* presents various MIP models and provides heuristic algorithms for scheduling flexible flow shops and surface mount technology lines, balancing and scheduling of Flexible
