This volume addresses ten issues pertaining to energy and the environment such as climate change, fossil fuels, endangered species, and renewable energy, and examines how these issues are affecting countries around the world. In the industrial age, first powered by coal and then more often by oil, environmental degradation nearly inevitably followed resource exploitation and energy production. This book examines environmental issues in specific countries around the world as well as solutions some of these countries have discovered in order to help save the environment. This volume includes 10 chapters, each addressing a specific issue relating to energy and the environment as it pertains to a variety of countries, including toxic chemicals, pollution, deforestation, and climate change. Each chapter begins with an introduction to the issue. Following the chapter introduction, each chapter highlights that issue in eight countries and provides historic perspective. This work provides an overview for high school students and college students at the undergraduate level on 10 important topics that address matters relating to energy and the environment in the 21st century.
