Groups And Computation II:

Groups and Computation II Larry Finkelstein, William M. Kantor, Consists of papers presented at the workshop on Groups and Computation held at DIMACS Groups and Computation II. Larry Finkelstein, 1997 The workshop Groups and Computations took place at the Center for Discrete Mathematics and Theoretical Computer Science DIMACS at Rutgers University in June 1995 This and an earlier workshop see Groups and Computation Finkelstein and Kantor 1993 American Mathematical Society held in October 1991 was aimed at merging theory and practice within the broad area of computation with groups The primary goal of the previous workshop was to foster a dialogue between researchers studying the computational complexity of group algorithms and those engaged in the development of practical software **Groups and Computation III** William M. Kantor, Ákos Seress, 2014-01-02 This volume contains contributions by the participants of the conference Groups and Computation which took place at The Ohio State University in Columbus Ohio in June 1999 This conference was the successor of two workshops on Groups and Computation held at DIMACS in 1991 and 1995 There are papers on permutation group algorithms finitely presented groups polycyclic groups and parallel computation providing a representative sample of the breadth of Computational Group Theory On the other hand more than one third of the papers deal with computations in matrix groups giving an in depth treatment of the currently most active area of the field The points of view of the papers range from explicit computations to group theoretic algorithms to group theoretic theorems needed for algorithm development *Finite Geometries, Groups, and Computation* Alexander Hulpke, 2006 Contains the proceedings of a conference on Finite Geometries Groups and Computation that took place in September 4-9 2004 at Pingree Park Colorado a campus of Colorado State University This work serves to introduce both students and the mathematical community to the important topics and gives an overview of developments in these fields Groups St Andrews 2009 in Bath: Volume 2 C. M. Campbell, M. R. Quick, E. F. Robertson, C. M. Roney-Dougall, G. C. Smith, G. Traustason, 2011-06-16 Groups St Andrews 2009 was held in the University of Bath in August 2009 and this second volume of a two volume book contains selected papers from the international conference Five main lecture courses were given at the conference and articles based on their lectures form a substantial part of the proceedings This volume contains the contributions by Eamonn O'Brien Auckland Mark Sapir Vanderbilt and Dan Segal Oxford Apart from the main speakers refereed survey and research articles were contributed by other conference participants Arranged in alphabetical order these articles cover a wide spectrum of modern group theory The regular proceedings of Groups St Andrews conferences have provided snapshots of the state of research in group theory throughout the past 30 years Earlier volumes have had a major impact on the development of group theory and it is anticipated that this volume will be equally important **Permutation Group Algorithms** Ákos Seress, 2003-03-17 Table of contents *Some Tapas of Computer Algebra* Arjeh M. Cohen, Hans Cuyper, Hans Sterk, 1998-12-15 This book presents the basic concepts and algorithms of computer algebra using practical examples that illustrate their actual use in symbolic

computation A wide range of topics are presented including Groebner bases real algebraic geometry lie algebras factorization of polynomials integer programming permutation groups differential equations coding theory automatic theorem proving and polyhedral geometry This book is a must read for anyone working in the area of computer algebra symbolic computation and computer science

Computational Group Theory and the Theory of Groups, II Luise-Charlotte Kappe, Arturo Magidin, Robert Fitzgerald Morse, 2010-04-08 This volume consists of contributions by researchers who were invited to the Harlaxton Conference on Computational Group Theory and Cohomology held in August of 2008 and to the AMS Special Session on Computational Group Theory held in October 2008 This volume showcases examples of how Computational Group Theory can be applied to a wide range of theoretical aspects of group theory Among the problems studied in this book are classification of p groups covers of Lie groups resolutions of Bieberbach groups and the study of the lower central series of free groups This volume also includes expository articles on the probabilistic zeta function of a group and on enumerating subgroups of symmetric groups Researchers and graduate students working in all areas of Group Theory will find many examples of how Computational Group Theory helps at various stages of the research process from developing conjectures through the verification stage These examples will suggest to the mathematician ways to incorporate Computational Group Theory into their own research endeavors

Beklemishev, Andreas Blass, Nachum Dershowitz, Bernd Finkbeiner, Wolfram Schulte, 2015-09-05 This Festschrift is published in honor of Yuri Gurevich's 75th birthday Yuri Gurevich has made fundamental contributions on the broad spectrum of logic and computer science including decision procedures the monadic theory of order abstract state machines formal methods foundations of computer science security and much more Many of these areas are reflected in the 20 articles in this Festschrift and in the presentations at the Yurifest symposium which was held in Berlin Germany on September 11 and 12 2015 The Yurifest symposium was co located with the 24th EACSL Annual Conference on Computer Science Logic CSL 2015

An Invitation to Computational Homotopy Graham Ellis, 2019 An Invitation to Computational Homotopy is an introduction to elementary algebraic topology for those with an interest in computers and computer programming It expertly illustrates how the basics of the subject can be implemented on a computer through its focus on fully worked examples designed to develop problem solving techniques The transition from

basic theory to practical computation raises a range of non trivial algorithmic issues which will appeal to readers already familiar with basic theory and who are interested in developing computational aspects The book covers a subset of standard introductory material on fundamental groups covering spaces homology cohomology and classifying spaces as well as some less standard material on crossed modules These topics are covered in a way that hints at potential applications of topology in areas of computer science and engineering outside the usual territory of pure mathematics and also in a way that demonstrates how computers can be used to perform explicit calculations within the domain of pure algebraic topology itself The initial chapters include in depth examples from data mining biology and digital image analysis while the later chapters cover a range of computational examples on the cohomology of classifying spaces that are likely beyond the reach of a purely paper and pen approach to the subject An Invitation to Computational Homotopy serves as a self contained and informal introduction to these topics and their implementation in the sphere of computer science Written in a dynamic and engaging style it skilfully showcases a range of useful machine computations and will serve as an invaluable aid to graduate students working with algebraic topology
