Learning in Social Context: The Nature and Profit of Living in Groups for Development Ildikó Király, David Buttelmann, 2017-05-25 One of the distinctive features of humans is their unique sociality Humans live in organized societies that are characterized by a high level of interdependence of group members in various aspects of life ranging from the economic phenomenon of labour division to providing emotional support to others Under these circumstances the capacity to track social connections within and between groups has great adaptive value in managing everyday life We may understand the importance and adaptive value of tracking the scope of culturally shared knowledge if we consider the importance of cultural norms in guiding behaviour To become a competent member of their cultural group one must be able to conform to the group s specific behavioural norms and to accumulate culturally shared knowledge Acquiring this knowledge is essential for successful social interactions In contrast to current dominant explanatory theories emphasizing that social category formation is simply rooted in humans need to belong and affiliate with a group the aim of this e book is to provide evidence that in addition to its affiliative role children form social categories for epistemic purposes We show that children use specific cues like kinship patterns of resource allocation and consensus to understand group cohesion Section 1 Once children figured out who is in group and who is out group they show a significant in group bias in attention acting and learning Section 2 Yet this in group bias can be attenuated by induced synchronous behavior Section 3

Changing Urban Education Clarence Nathan Stone,1998 With critical issues like desegregation and funding facing our schools dissatisfaction with public education has reached a new high Teachers decry inadequate resources while critics claim educators are more concerned with job security than effective teaching Though urban education has reached crisis proportions contending players have difficulty agreeing on a common program of action This book tells why Changing Urban Education confronts the prevailing naivete in school reform by examining the factors that shape reinforce or undermine reform efforts Edited by one of the nation s leading urban scholars it examines forces for change and resistance in urban education and proposes that the barrier to reform can only be overcome by understanding how schools fit into the broader political contexts of their cities Much of the problem with our schools lies with the reluctance of educators to recognize the profoundly political character of public education The contributors show how urban political contexts vary widely with factors like racial composition the role of the teachers union and relations between cities and surrounding metropolitan areas Presenting case studies of original field research in Baltimore Chicago Houston and six other urban areas they consider how resistance to desegregation and the concentration of the poor in central urban areas affect education and they suggest how cities can build support for reform through the involvement of business and other community players By demonstrating the complex interrelationship between urban education and politics this book shows

schools to be not just places for educating children but also major employers and large spenders of tax dollars It also introduces the concept of civic capacity the ability of educators and non educators to work together on common goals and suggests that this key issue must be addressed before education can be improved Changing Urban Education makes it clear to educators that the outcome of reform efforts depends heavily on their political context as it reminds political scientists that education is a major part of the urban mix While its prognosis is not entirely optimistic it sets forth important guidelines that cannot be ignored if our schools are to successfully prepare children for the future

The Character of Homogeneity in Class and Grade Groups O. S. Hubbard,1917 **Friendship and Educational Choice** R. Brooks,2004-11-10 Friendship and Educational Choice provides a unique insight into how young people go about making decisions about their educational options and the subtle yet crucial influence of friends and peers on these processes It argues that focusing on both the impact of friends on educational decisions and the reciprocal influences that such decisions may exert on young people s friendships helps us to understand the significance and impact of educational choice in the wider lives of young people

Psychodidactic Variables and Academic Performance in Physical Education Antonio Baena Extremera,Antonio Granero-Gallegos,Raul Fernández Baños,2021-05-31 **Reconstructing Perceptions of Systemically Marginalized Groups** Ponciano, Leslie,2023-04-18 The professions that are designed to help others are often deeply ingrained with a pervasive deficit perspective that may hinder the potential for people who have been historically marginalized to achieve positive outcomes and may in unintentionally perpetuate marginalization and limit success Reconstructing Perceptions of Systemically Marginalized Groups edited by Leslie Ponciano offers a transformative solution by applying a strengths based approach to research theory and practice Challenging the prevailing mindset this book empowers professionals in various fields to create empowering environments that recognize the value of individuals and promote positive outcomes Covering a wide range of topics from childhood adversity to media influence and vocational training this comprehensive resource equips academic scholars with practical insights and strategies to challenge prevailing narratives and promote inclusivity By embracing the strengths based approach outlined in this book professionals can actively contribute to dismantling the deficit perspective paving the way for a more equitable and empowering future for people who have been historically marginalized

Urbanization and Affordances that Promote Well-Being for (Urban) People and for a Healthy Biosphere Stephan Barthel,Marketta Kyttä,2020-01-30 The world is urbanizing at an unprecedented rate It is estimated that in the near future urban landscapes for another ca 2 7 billion people will be built on planet Earth approximately converting land equivalent to the size of South Africa Such land conversion coupled with citizen densification increasing in equalities shifting diets and emerging technologies challenge human well being and pose ever increasing demand for resources generated by the Biosphere This Research Topic concentrates on the various ways urbanization can promote individual well being mental physical and social health as well as ecological health a healthy Biosphere What kind of affordances for human health

promotion can urbanization include What kinds of affordances for a psychological connection with nature can urbanization include What kinds of nudges for pro environmental behavior and consumption decreasing detrimental consumption behaviors can be actively designed in urban settings The Research Topic at hand uses a transactional approach where an affordance can be understood as a non deterministic in situ precondition for a human activity enabled by relations between abilities of an individual with features of an environment We encourage a broad definition of the concept of affordances where the environment must not be restricted to the material biophysical environment alone but also could be combined with social immaterial features We see that the transactional approach of this Research Topic posits that meaning arises in relations between humans and their environment that it will be equally applicable to natural and designed environments and that it doesn t regard dichotomies like city contra nature or social contra ecological Hence this Research Topic is interested in if the transactional approach can be used as a conceptual tool not only for promotion of mental physical and social health in cities but simultaneously for unraveling relations at the micro scale in cities which can be used for solutions that also promote a healthy Biosphere
