**Growing Pains** Jacob Mulugetta, Walter Wehrmeyer, 1999 An examination of environmental management in the south from a number of perspectives It is designed to stimulate the discussion about the role that corporations and national and international organizations play in sustainable development *Growing Pains* Walter Wehrmeyer, Jacob Mulugetta, 2017-10-19 Environmental management is a global phenomenon embracing all businesses in all countries whether or not there already exists an organised response to managing environmental impacts Today there are gross inequalities between the world's richest and poorest nations in terms of income distribution consumption patterns access to resources and environmental impact Yet both the developed north and the developing south are committed at least in words to achieving sustainable development Public awareness of environmental issues in the North has been rising in recent years and further degradation is now largely minimized through more stringent regulatory regimes voluntary agreements and growing consumer and stakeholder pressure on corporations Still the north is continuing to lead an environmentally unsustainable lifestyle as environmental improvements are nullified by overall increases in consumption levels In the south a billion people still do not have access to the most basic needs Poor countries need to accelerate their consumption growth if they are to ensure that the lives of their people are enriched However with rapid economic growth and corresponding increases in consumption now under way their environmental impact is soon to become substantially greater In a world that strives towards stemming global crises such as climate change the path already taken by the rich and high growth economies over the past century cannot be repeated by the south if the desired objective is to create a future that is truly sustainable *Growing Pains* examines environmental management in the south from a number of perspectives It is designed to stimulate the discussion about the role that corporations and national and international organizations play in sustainable development It does not offer panaceas as each country has its own problems and opportunities and after almost 50 years of failed panacea oriented economic development policy transfer from the north to the south it is time to abandon hope for universal solutions and instead look to individual approaches that work The book is divided into five themes globalization the role of business a focus on national strategies trade and the environment and the organizational and structural challenges of sustainable development With contributions from an outstanding collection of authors in both the developed and developing worlds including UNIDO the Thailand Environment Institute Arthur D Little Inc Shell Peru IUCN the Russian Academy of Sciences and IIED this important and unique new book presents a body of work that will provide essential reading for businesses working in developing countries environmental and developmental NGOs and researchers engaged in the debate and sharing of best practice in this increasingly critical subject area

**International Investment for Sustainable Development** Lyuba Zarsky, 2012-05-23 International Investment for Sustainable Development critically examines the interface between sustainability development and the governance of international investment It challenges the conventional

view that foreign direct investment is a miracle drug for developing countries and exposes serious shortcomings in the current international investment regime Composed of norms agreements treaties and regulations the emerging investment regime expands the rights of transnational corporations TNCs without commensurate rewards for the common good Drawing on both research and engaged advocacy the contributors ultimately map out a new way forward towards the creation and implementation of international investment rules that will promote global sustainability and equity **Living with**

**Environmental Change** W. Neil Adger, P. Mick Kelly, Nguyen Huu Ninh, 2012-12-06 Vietnam and the neighbouring countries of Southeast Asia face diverse challenges created by the rapid evolution of their social economic and environmental systems and resources Taking a multidisciplinary perspective this book provides a comprehensive assessment of the Vietnamese situation identifying the factors shaping social vulnerability and resilience to environmental change and considering prospects for sustainable development **International Environmental Law and Asian Values** Roda Mushkat, 2004

Following decades of vigorous economic expansion Asia is confronting the environmental consequences of unfettered development This poses a challenge because of the strong bias of prevailing cultural systems in the region toward the goal of lifting standards of living over achieving ecological sustainability This book juxtaposes international environmental norms and practices with relevant Asian policies and their applications in key areas Roda Mushkat examines the fundamental principle of public participation in environmental law making as well as the rights approach against the emergence of democratic and human rights norms in the region The complex relationship between trade and the environment is also discussed in light of the strong regional emphasis on economic growth trade liberalization and the aversion to conditionalities Given regionalization processes in Asia Pacific and elsewhere this work seeks to establish to what extent such processes have led to the regionalization of international environmental law International Environmental Law and Asian Values concludes that although some gaps can be identified between international imperatives and regional responses Asian values have not proved to be an insurmountable barrier to the spread of international environmental legal ideas On the whole the region is responding to impulses emanating from the global arena rather than resisting them consciously The analysis and conclusions of this comprehensive and original work will be of considerable interest to scholars of international law and relations environmental policy comparative culture economic development and social change **The First Decade of**

**NAFTA: The Future of Free Trade in North America** Kevin Kennedy, 2021-10-25 This volume provides practitioners academics and students with the first definitive coverage of NAFTA investment arbitration Given the level of foreign direct investment within the NAFTA countries the issue of redress for states in investment cases is a major one The state dispute settlement mechanisms within NAFTAs Chapter Eleven are recognized as a model worthy of close examination The experts and scholars who have contributed to this work present a comprehensive overview of the first ten years of practice in the area of investment disputes under the NAFTA provision As in any nascent undertaking the successes failures and

controversies that have been the experience of the state parties involved in NAFTA are keenly reflected in the Chapter 11 cases. It is in these experiences as described by in the chapters of this timely volume that the readers will find substantive and procedural insights into an emerging new area of public international economic law. Many see the workings of the NAFTA agreement particularly Chapter 11 as a Rorschach test for how state parties can approach and effectively adjudicate investment disputes. For this reason all practitioners and scholars concerned with international trade and foreign direct investment issues should consult this book. Published under the Transnational Publishers imprint *The New Political Economy of Southeast Asia* Rajah Rasiah, Johannes Dragsbaek Schmidt, 2010-01-01. This well researched book examines the dramatic transformation of Southeast Asian countries from agricultural and mining economies to industrial nations. In doing so it explores the effects of development policy on a number of interdisciplinary issues and the emergence of new social and political pressures created by industrialization. These include their heightened vulnerability to complex economic crises, their use of sophisticated instruments in the labour process and increased awareness of environmental issues. The distinguished authors present a regional and cross border focus on transnational actors and institutions and the policy issues and problems which have a wider impact on spatial configurations in the region. This insightful study will appeal to researchers, academics and policymakers working on the economics and development of Southeast Asia.

*Reinventing Government for the Twenty-first Century* Dennis A. Rondinelli, G. Shabbir Cheema, 2003. Melds theoretical models with practical experience. Written by world renowned experts on public administration. Guides future policy debates on helping to build effective and efficient states. How does a government seeking to participate in and benefit from an integrated and interdependent world become more professional, technologically proficient, deregulated and accountable? *Reinventing Government for the Twenty First Century* tells you how. The authors identify the forces of globalization and the structural changes needed to increase state capacity and enhance global scale participation. Professionals directly involved in assisting governments show public leaders and administrators how to improve the quality of their performance in government.

**Greening Industrialization in Asian Transitional Economies** A. P. J. Mol, Joost C. L. van Buuren, 2003-01-01. Studying transition economies is one of the most challenging tasks faced by those who wish to understand the political, social and economic changes that the world has undergone since the end of the Cold War. *Greening Industrialization in Asian Transitional Economies* is a collection of essays which examine environmental performance and the transition to market economies, particularly in China and Vietnam. A comprehensive assessment of the state of industrial environmental management, this informative volume looks at the movement for cleaner production from many perspectives, analyzing its historical roots, its political influences, its implementation and its economic and technological feasibility. Readers of these excellent essays will be left with an in depth understanding of both the necessity for environmental improvements in rapidly industrializing economies and the difficulties and challenges which this goal entails. An ambitious and important project. *Greening Industrialization in Asian Transitional*

Economies provides a wide ranging analysis of a vital topic

**Organizations and the Sustainability Mosaic** Sanjay Sharma, Mark Starik, Bryan Husted, 2007-01-01 Organizations and the Sustainability Mosaic is an inspired collection of papers by a distinguished group of scholars who have been thinking about these issues for many years The editors have done an outstanding job of framing and focusing the discussion on a group of issues that will matter most as all businesses engage their sustainability challenges Your thinking will be challenged and rewarded by the chapters of this book James E Post Boston University US The contributors to this book present research on crafting long term ecological and societal solutions in order to achieve sustainability The in depth analyses explore the interactions among social environmental and development impacts of organizations at community regional national and global levels In doing so they shed light on the way forward amidst the complexity of issues involved referred to here as the sustainability mosaic

**Environmental Politics in the Middle East** Harry Verhoeven, 2018-09-01 This book investigates how ecology and politics meet in the Middle East and how those interactions connect to the global political economy Through region wide analyses and case studies from the Arabian Peninsula the Gulf of Aden the Levant and North Africa the volume highlights the intimate connections of environmental activism energy infrastructure and illicit commodity trading with the political economies of Central Asia the Horn of Africa and the Indian subcontinent The book's nine chapters analyze how the exploitation and representation of the environment have shaped the history of the region and determined its place in global politics It argues that how the ecological is understood instrumentalized and intervened upon is the product of political struggle deconstructing ideas and practices of environmental change means unravelling claims of authority and legitimacy This is particularly important in a region frequently seen through the prism of environmental determinism where ruling elites have imposed authoritarian control as the corollary of environmental crisis This unique and urgent collection will question much of what we think we know about this pressing issue

**Nomadic Societies in the Middle East and North Africa** Dawn Chatty, 2018-11-12 A scholarly volume devoted to an understanding of contemporary nomadic and pastoral societies in the Middle East and North Africa This volume recognizes the variable mobile quality of the ways of life of these societies which persist in accommodating the nation state of the 20th and 21st century but remain firmly transnational and highly adaptive Composed of four sections around the theme of contestation it includes examinations of contested authority and power space and social transformation development and economic transformation and cultures and engendered spaces

*Empowerment Through Economic Transformation* Meshack M. Khosa, 2001 This the third title in a trilogy studying transformation in post apartheid South Africa follows on two studies published in 2000 Infrastructure mandates for change and empowerment through service delivery

**Business and Public Policy** Jorge E. Rivera, 2010-08-05 It is increasingly common for businesses to face public policies and government regulation that demand some form of environmental or social protection These protective public policies have grown in number complexity and stringency over the last few decades not only in industrialized countries but

also in the developing world In this 2010 book Jorge Rivera presents a theoretical framework for understanding the relationship between protective public policies and business compliance This framework explains different levels of business compliance in terms of three different factors the link between the stages of protective public policies and different levels of business resistance the effect of country context and the effect of firm level characteristics The second part of the book supports and elaborates on this framework by presenting empirical studies that examine two voluntary environmental programs the US ski industry s Sustainable Slopes Program and the Certification for Sustainable Tourism in Costa Rica

**Voluntary Environmental Agreements** Patrick ten Brink, 2017-08-25 Voluntary environmental agreements VEAs generally agreements between government and business have been regarded by many as a key new instrument for meeting environmental objectives in a flexible manner Their performance to date has however also led to considerable criticism with several parties arguing that they are methods for avoiding real action that goes beyond business as usual Is either of these positions justified The aim of this book is to highlight and learn the lessons from existing experience looking not just at results but also at specific elements of agreements and also at the process of the agreement itself Lessons are drawn from experience from across the world covering the full range of environmental challenges and from the perspective of key stakeholder groups Importantly the book also presents tools for assessing and improving existing agreements and includes recommendations and guidelines for future agreements in key areas such as climate change It also deals at length with the problem of how such agreements might be used in developing and transitional economies The overall view of the book is that there is a real potential for the future use of VEAs as part of the policy mix and as a tool for sharing the responsibility for meeting environmental objectives For the agreements to play this role however significant steps are needed to ensure that they are effective efficient equitable and appropriately linked to a portfolio of other instruments The book is divided into four sections First existing agreements their development and efficacy are considered second the prospects for voluntary agreements in developing and transitional economies are discussed third a range of authors examine the role of VEAs as part of the policy mix to combat climate change and finally the book concludes with an examination of how new tools for evaluating and improving VEAs could be utilized in the future Voluntary Environmental Agreements will be of interest not only to academics governments and businesses wishing to understand this specific instrument but also to those already implementing or considering applying VEAs to meet their environmental objectives

**Voluntary Environmental Programs** Peter DeLeon, Jorge E. Rivera, 2010-01-01 Voluntary Environmental Programs pose a means by which industry government and other interested groups can cooperatively agree upon socially acceptable restraints Rather than relying on complete government control of environmental laws Voluntary Environmental Programs rely on a voluntary system for businesses They pose their unique problems predicated on the effectiveness of voluntary self constraint

*Biodiversity Conservation in Latin America and the Caribbean* Allen Blackman, Rebecca Epanchin-Niell, Juha Siikamäki, Daniel

Velez-Lopez,2014-05-23 Latin America and the Caribbean LAC region is exceptionally biodiverse It contains about half of the world s remaining tropical forests nearly one fifth of its coastal habitats and some of its most productive agricultural and marine areas But agriculture fishing and other human activities linked to rapid population and economic growth increasingly threaten that biodiversity Moreover poverty weak regulatory capacity and limited political will hamper conservation Given this dilemma it is critically important to design conservation strategies on the basis of the best available information about both biodiversity and the track records of the various policies that have been used to protect it This rigorously researched book has three key aims It describes the status of biodiversity in LAC the main threats to this biodiversity and the drivers of these threats It identifies the main policies being used to conserve biodiversity and assesses their effectiveness and potential for further implementation It proposes five specific lines of practical action for conserving LAC biodiversity based on green agriculture strengthening terrestrial protected areas and co management improving environmental governance

strengthening coastal and marine resource management and improving biodiversity data and policy evaluation **Aquatic Ecosystems** Nicholas V. C. Polunin,2008-09-11 Concern about future supplies of fresh water to society to meet the full range of human needs now comes very high on the priority list of global societal issues An overarching issue which this book addresses is whether global climate change is a dominant driver of change in the structure and function of all natural water based ecosystems or whether direct human population growth and accelerated consumption are playing an equal or greater role This book divides the whole aquatic realm into 21 ecosystems from those on land both saline and fresh water to those of the open and deep oceans It draws on the understanding of leading ecologists to summarize the state and likely condition by the year 2025 of each of the ecosystems Written for academic researchers and environmental professionals the aim is to put the climate change debate into a broader context as a basis for conservation science and planning **Hydropolitics in the**

**Developing World** Anthony Turton,Roland Henwood,2002 Bringing contributions by a variety of authors together in one volume is part of an attempt to show that hydropolitics is a growing discipline in its own right The prevailing definition of hydropolitics is widened to include the elements of scale and range This is illustrated through a focus on theoretical and legal issues case studies from Southern Africa and a proposed research agenda The book is an important addition to the literature on hydropolitics Partnership and Leadership

T. de Bruijn,Arnold Tukker,2013-10-14 Sustainable development has become a central perspective in environmental strategies around the world It is clear that neither governments nor businesses have the capability to bring about sustainability on their own Therefore collaboration has emerged as a central concept At the same time it is obvious that someone has to take the lead in the development towards sustainability This book focuses on different forms of collaboration emerging between various actors The objective of the book is to more systematically explore the different roles and relationships between partnership and leadership Basically both partnership and leadership can be seen in a positive and negative way for example as far as partnership is concerned we can assume that the path towards

sustainability can be paved by parties coming together taking some initiative collaborating On the opposite partnership and consensus based decisions can be seen as an obstacle to foster radical changes in production and consumption patterns Similarly leadership can be seen as an obstacle to sustainable development if leaders form close circles and are not willing to share experiences with other actors but leadership could also be considered as an important element to keep concepts and practices forward The book holds this double perspective explaining mapping and analyzing different goals formats methods of more and less collaborative approaches but at the same time taking a critical approach to the theme by understanding related risks effects prospects and corrective actions Next to a conceptual part the book brings together case studies from around the world The focus is in describing and understanding various formats of collaboration and critically evaluating its effects and prospects A concluding chapter discusses the role of partnership and leadership in realizing various levels of environmental innovations optimization and re design that usually affect only a small part of the production consumption structure and much more complicated radical innovations that have to deal with societal sub systems The book is in part an edited version of selected papers presented during the 1998 Greening of Industry Conference in Rome on the subject enriched with contributions of other invited authors
