Growth Factors And The Ovary:

Growth Factors and the Ovary Anne N. Hirshfield, 2013-06-29 The First Ovarian Workshop was held in June 1976 its goal was to achieve a collective understanding of current thought on ovarian follicular development and function and to generate clear definitions of the most important areas to be explored in the future The Ovarian Workshops quickly became a major biennial event for the community of reproductive biologists and their students studying ovarian function As a young graduate student I gave my first scientific presentation at the First Ovarian Workshop and I have attended all but one of the subsequent meetings The Workshops provided a unique forum for the sharing of ideas with colleagues studying closely related problems I was therefore especially pleased to have been asked to organize the Seventh Ovarian Workshop and to be given an opportunity to help perpetuate these important meetings The Seventh Ovarian Workshop was held on the campus of the University of Puget Sound in Tacoma Washington on July 31 and August 1 1988 Serono Symposia USA generously financed and coordinated the meeting I would like to express my particular thanks to Dr L Lisa Kern and Dr James Posillico for their invaluable help prior to during and after the meeting I would also like to thank Mary Benson and her staff at the University of Puget Sound who made us feel at home in every way

Growth Factors and the Ovary Anne Hirshfield, 2014-01-15 Ultrastructure of the Ovary G. Familiari, Sayoko Makabe, P. Motta, 2012-12-06 *The Ovary* Peter C.K. Leung, Eli Y. Adashi, 2003-12-18 This second edition of *The Ovary* incorporates the dramatic research developments regarding the ovarian life cycle within the past decade It looks at ovarian function from a detailed molecular and cellular level The updated chapters along with the new material represent an unparalleled compilation of chapters relevant to contemporary ovarian physiology The book is divided into 8 sections The Ovarian Follicular Apparatus Operational Characteristics Oocyte Maturation and Ovulation The Corpus Luteum Putative Intraovarian Regulators Cyclic Ovarian Cell Death Novel Experimental Models Human Ovarian Pathophysiology Select Aspects and Human Ovarian Surface Epithelium and Neoplasia Addresses all phases of the ovarian life cycle New information includes the latest developments in ovarian surface epithelium Contains 38 in depth chapters The Tumor Microenvironment of High Grade Serous Ovarian Cancer M.

Sharon Stack, Kenneth P. Nephew, Joanna E. Burdette, Anirban K. Mitra, 2019-02-06 This book is a printed edition of the Special Issue *The Tumor Microenvironment of High Grade Serous Ovarian Cancer* that was published in *Cancers* The Primate Ovary Richard Stouffer, 2013-03-09 This 1987 ORPRC Symposium on Primate Reproductive Biology the third in a series marked the twenty fifth anniversary of the Oregon Regional Primate Research Center ORPRC In organizing these symposia we have emphasized the dedication of many ORPRC staff members to research with nonhuman primates as models for human reproduction The first symposium in this series organized by William Montagna was held in May 1981 Appropriately for a beginning series its topic was fetal endocrinology The subject of this year's symposium was the primate ovary and as in the past scientists from around the world including Sweden Scotland England West Germany and India met

in Beaverton Oregon to exchange ideas and information on this important aspect of reproduction The international scope of the symposium reflects our belief that both the problems and their solutions extend beyond national boundaries Many of the nonhuman primates that we rely on as models are endangered as civilization through population pressure encroaches on their natural habitats Without a deeper understanding of how primate reproduction is regulated and without the control over human population that such an understanding can bring the quality of life for all primate species may well become substantially diminished Consequently we dedicate these symposia to the thesis that a deeper understanding of primate reproductive biology will ultimately improve all primate life Robert M Brenner Charles H Phoenix vii PREFACE Today there is renewed interest in the processes controlling the gametogenic and endocrine functions of the ovary *Ultrasound and the Ovary* A. Kurjak,1994-06-15 This volume explains how sonography is now used to explore all aspects of ovarian structure physiology and disease the ovary is perhaps the most active organ in the female body and as such is particularly complex in its embryology histology and steroidogenesis It is derived from a range of tissue types and represents the site of origin of a larger variety of primary and secondary cancers than any other organ Because of this complexity the use of diagnostic ultrasound is becoming increasingly important not only in expanding the understanding of the ovary but in enhancing the potential for early diagnosis of ovarian tumours , **Molecular Biology of the Female Reproductive System** J. K. Findlay,2012-12-02 New techniques in cellular and molecular biology have increased our understanding of the mechanisms controlling reproductive function in the female Emphasizing these new techniques *Molecular Biology of the Female Reproductive System* provides a state of the art review of local regulatory mechanisms that control reproductive processes Stressing the interface of endocrinology immunology and cell biology this book concentrates on the autocrine paracrine and endocrine systems that regulate both the functions of the ovary and uterus and the interaction between the early embryo and the mother Covers the mechanisms controlling reproductive function in the female Offers a cellular and molecular approach to the control of reproductive function Focuses on the ovary and uterus and includes a discussion of the early embryo including Hormonal control of folliculogenesis and luteal function Cell cell interactions in the follicle Role of cytokines in regulating steroid and protein hormone production Endocrine receptors and mechanisms in ovulation Cell biology of the oviduct and uterus Migratory cells Paracrine regulation Hormones of the trophoctoderm and early placenta Interaction between trophoctoderm and endometrium Provides extensive references *Regulation of Ovarian and Testicular Function* Virendra B. Mahesh,Dharam S. Dhindsa,Everett Anderson,Satya P. Kalra,2012-12-06 Rapid advances have taken place in various aspects of reproductive biology during the last decade These advances have centered around several organ systems that comprise the reproductive system and encompass molecular events and structure function relationships It becomes important to review these advances in knowledge at periodic intervals with respect to feedback systems and regulatory loops that control reproductive processes in vivo Towards this end a workshop entitled Functional Correlates of Hormone

Receptors in Reproduction sponsored by the National Institute of Child Health and Human Development and the Reproductive Biology Study Section of the Division of Research Grants National Institutes of Health was held in October 1980 The proceedings of the workshop were published by Elsevier Biomedical New York This workshop was followed by two workshops sponsored by the Reproductive Biology Study Section of the Division of Research Grants National Institutes of Health entitled Role of Peptides and Proteins in Control of Reproduction in February 1982 and published by Elsevier Biomedical and Molecular and Cellular Aspects of Reproduction in October 1985 and published by Plenum Press It was therefore timely to review the current state of knowledge regarding the regulation of ovarian and testicular function by bringing together scientists working in separate and discrete aspects of reproduction to review the functional implications of their research on the regulation of function within the same tissue and also in relationship to feedback systems and regulatory loops with other tissues

Biology of Female Cancers Simon P. Langdon, William R. Miller, Andrew Berchuck, 1997-03-18 Biology of Female Cancers explores what can be learned about female cancers by summarizing what is known about the mechanisms of growth regulation and genetic features associated with common forms of female cancers including malignancies of the breast ovary uterus cervix vulva and gestational trophoblastic disease The book describes the etiology incidence pathology staging and treatment of each type of cancer The risk of developing particular tumor types and how their growth may be influenced by hormones growth factors and cytokines is also discussed For oncologists gynecologists and obstetricians cell biologists and everyone interested in learning more about female cancers the Biology of Female Cancers offers a comprehensive unique approach

Polycystic Ovary Syndrome R. Jeffrey Chang, 2012-12-06 The term polycystic ovary syndrome peOS is meant to describe a clinical endocrinopathy characterized by menstrual irregularity and evidence of hyperandrogenism While recognized since the 1800s a clinical composite was not constructed until 1935 when Stein and Leventhal reported their findings of seven women with infertility menstrual dysfunction hirsutism and enlarged ovaries Notably the ovaries contained numerous multiple cysts and the ovarian capsule was thickened At the time this preciseness of definition was sufficient to entitle the entity Stein Leventhal syndrome Subsequently over the intervening years as investigators attempted to unravel the pathophysiology and genesis of this disorder and the number of reported studies increased there ensued a gradual and distinct terminologic conversion to polycystic ovary syndrome which whether intentional or not connoted a less well defined condition Perhaps this is appropriately so given the seemingly broadening spectrum of clinical presentations and the continuing debate over what constitutes peos The expansive new knowledge about peos was discussed to a significant degree at an international symposium organized by Serono Symposia USA and held in Boston in the late spring of 1995 Ovarian physiology including the fate of the follicular unit was a central focus with several presentations on the genesis growth and death of ovarian cellular components A discussion of the regulation of ovarian cell function was also highlighted and comprised a major portion of the program

Frontiers in Gynecologic and Obstetric

Investigation A.R. Genazzani, F. Petraglia, 1993-01-15 This volume provides a review of the recent advances that have been made in gynaecological and obstetric investigation and considers their clinical applications as well as their diagnostic and therapeutic implications

Clinical Reproductive Medicine and Surgery Tommaso Falcone, William W. Hurd, 2013-05-22 Clinical Reproductive Medicine and Surgery offers a succinct overview of both the medical and surgical management of reproductive disorders as well as coverage of associated imaging modalities The book includes chapters on major reproductive endocrinology and infertility issues such as polycystic ovary syndrome and amenorrhea management of endometriosis and fibroids including interventional radiology imaging modalities such as ultrasonography and sonohysterography preservation of fertility and recurrent pregnancy loss Residents fellows and practitioners interested in reproductive endocrinology and infertility will find this focused and practical text invaluable

Cell Death in Mammalian Ovary Gerardo H. Vázquez-Nin, María Luisa Escobar, M. De Felici, Olga Margarita Echeverría, Francesca Gioia Klinger, 2011-05-26 The ovary is a suitable organ for studying the processes of cell death Cell death was first described in the rabbit ovary Graaffian follicles the phenomenon being called chromatolysis To date it is recognized that various forms of cell death programmed cell death apoptosis and autophagy are essential components of ovarian development and function Programmed cell death is responsible for the ovarian endowment of primordial follicles around birth in the prepuberal and adult period apoptosis is a basic mechanism by which oocytes are eliminated by cancer therapies and environmental toxicants in the ovarian cycle follicular atresia and luteal regression involve follicular cell apoptosis Finally abnormalities in cell death processes may lead to ovarian disease such as cancer and chemoresistance In this book after an introductory description of various forms of cell death and of the ovary development and function in mammals the processes of cell death in ovarian somatic cells and oocytes are described at cytological physiological and molecular levels and analyzed in the embryonic prepuberal and adult ovary A complex array of molecular pathways triggered by extrinsic and intrinsic signals able to induce or suppress cell death in the same cell according to cell type and ovary developmental stage emerges Physiological interactions with the axis hypothalamus hypophysis as well as ovarian internal functional signal are also critically reviewed to explain the abortive development of follicles before the beginning of the ovarian cycle The book conveys information useful to the updating of biologists and physicians who are interested to the ovary biology and functions Hopefully it should provide also clues for stimulating novel experiments in the study of cell death in the mammalian ovary still at an early stage
