Growth Policy In The Age Of High Technology The Role Of Regions And States:

Growth Policy in the Age of High Technology Jurgen Schmandt, Robert Wilson, 2018-03-29 Originally published in 1990 this book provides an authoritative and detailed account of the initiatives of US state governments with science and technology programs designed to foster economic growth Two key questions are posed Do state governments have policy instruments that are sufficiently powerful to affect the levels and growth rates of their regional economies and Are national and global economic forces so powerful that they render state action ineffective Several subsidiary themes are discussed in this context namely the most commonly used policy instruments the impacts on federalism and on governance and how well the universities and other educational institutions serve the economic activities imposed on them States' Industrial Technology Programs United States. Congress. Joint Economic Committee, 1994 **Technology Policy and Competitiveness Legislation: Overview and financing** United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Technology, Environment, and Aviation, 1993 **Technology Policy and Competitiveness Legislation** United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Technology, Environment, and Aviation, 1993 **Urban Change in the United States and Western Europe** Anita A. Summers, P. C. Cheshire, Lanfranco Senn, 1999 In this completely revised second edition the authors explore what can be learned from a rigorous comparison of the patterns of urban concentrations of residents and employment in Western Europe and the United States Using a wide range of methodological techniques including economic theory econometrics regional science and institutional historical analysis the essays analyze the factors underlying urban economic development with particular emphasis on the role and effectiveness of public policy **The Geography of Innovation** M.P. Feldman, 2013-06-29 This book offers a geographic dimension to the study of innovation and product commercialization Building on the literature in economics and geography this book demonstrates that product innovation clusters spatially in regions which provide concentrations of the knowledge needed for the commercialization process The book develops a conceptual model which links the location of new product innovations to the sources of these knowledge inputs The geographic concentration of this knowledge forms a technological infrastructure which promotes information transfers and lowers the risks and the costs of engaging in innovative activity Empirical estimation confirms that the location of product innovation is related to the underlying technological infrastructure and that the location of the knowledge inputs are mutually reinforcing in defining a region's competitive advantage The book concludes by considering the policy implications of these findings for both private firms and state governments This work is intended for academics policy practitioners and students in the fields of innovation and technological change geography and regional science and economic development This work is part of a larger research effort to understand why the location of innovative activity varies spatially specifically the externalities and increasing returns which accrue to location xi Acknowledgements This work has benefitted greatly from

Innovative Behaviour in Space and Time Cristoforo S. Bertuglia, Silvana Lombardo, Peter Nijkamp, 2012-12-06 In the past decade there has been growing recognition that economic development is not mainly exogenously determined but to a large extent is a transformation process induced and governed by economic actors who respond to competitive institutional and political challenge This challenge and response model is increasingly accepted as a valid analytical framework in modern growth theory and also explains the popularity of endogenous growth approaches to technological innovation issues However a major and as yet largely under researched topic is the question of the diffusion and adoption of new technological changes in the context of space time dynamics This diffusion and adoption pattern has obviously clear spatial and temporal variations connected with behavioural responses which may vary over time and different locations This means that a closer analysis of spatio temporal opportunities and impediments is necessary in order to fully map the complex interactions of technology and economy in space and time This volume sets out to bring together a collection of original contributions commissioned by the editors to highlight the spatio temporal patterns and backgrounds of the diffusion and adoption of new technologies Some are in the nature of a survey others have a modelling background and again others are case studies The contributions originate from different countries and different disciplines This book is complementary to a previously published volume on technological innovation Technological Change Economic Development and Space edited by C S Bertuglia M M Fischer and G Preto and also published by Springer Verlag 1995

The Economics of American Higher Education William E. Becker Jr., D.R. Lewis, 2012-12-06 Postsecondary educational institutions in the United States are facing increasing financial stress and waning public support Unless these trends can be changed higher education can be expected to stagnate What if anything can be done As a starting point advocates of higher education need to more fully recognize the issues associated with the economic mission of higher education and how this mission gets translated into individual student gains regional growth and social equity This requires an understanding of the relationship between the outcomes of higher education and measures of economic productivity and well being This volume addresses topics related to the role of postsecondary education in microeconomic development within the United States Attention is given to the importance of colleges and universities in the enhancement of individual students and in the advancement of the communities and states within which they work Although several of the chapters in this volume are aimed at research teaching universities much of what is presented throughout can be generalized to all of postsecondary education Little attention however is given to the role of higher education in the macroeconomic development of the United States this topic is covered in our related book American Higher Education and

National Growth *Regional Competitiveness* Ron Martin, Michael Kitson, Peter Tyler, 2012-11-12 There is now a wide spread interest in regions as a key focus in the organization and governance of economic growth and wealth creation This important book considers the factors that influence and shape the competitive performance of regions This is not just an issue of academic interest and debate but also of increasing policy deliberation and action However as the readings in this book make clear the very idea of regional competitiveness is itself complex and contentious Many academics and policy makers have used the concept without fully considering what is meant by the term and how it can be measured Policy formulation has tended to rush ahead of understanding and analysis and the purpose of this book is to close this important gap in understanding This book was previously published as a special issue of *Regional Studies* **George P. Mitchell and the Idea of Sustainability** Jurgen Schmandt, 2010-10-11 An energy tycoon real estate developer and philanthropist George P Mitchell is also an idealist a big thinker who gave his time and fortune to the study of sustainability long before it became a household word Jurgen Schmandt who has worked for Mitchell for many years explains and traces the idea of a sustainable society from its origin in the eighteenth century concept of the commons to its twentieth century iteration in the 1987 United Nations report *Our Common Future* He then chronicles Mitchell's commitment to this idea from the early 1960s when the focus was on population growth to today when climate change and global warming dominate the debate Mitchell advanced his belief that humankind could create a balance between economic and ecological well being by organizing and hosting conferences awarding prizes supporting scholars and scientists and funding research and publications He did it at the Aspen Institute at The Woodlands Conferences at the National Academy of Sciences at the Mitchell Center for Sustainable Development and at the Houston Advanced Research Center Paradoxically he did not always do it in his own energy company Documenting one important man's engagement with one important idea Schmandt has preserved a significant episode in the ongoing quest to create societies that are capable of reaching and then sustaining a decent quality of life for their citizens
