Economies argues that only two centuries ago no society had ever enjoyed sustained growth in living standards. The contributors to this book aim to discover why the world today exhibits a predilection for perpetual self improvement. In particular, the book focuses on the forces underlying long lasting growth in East Asia's Newly Industrialized Countries (NICs). Drawing from the experiences of Hong Kong, South Korea, Singapore, and Taiwan, it questions whether public policy can contribute to removing barriers towards accumulation of wealth and if so, what development policy should be put in place to remedy the existing distortions or market failure problems.

International Productivity and Competitiveness Bert G. Hickman, 1992. This volume conveys the state of the art of contemporary research on productivity growth and international competitiveness, arguably the most important problems facing contemporary economies. It assembles papers by an international roster of leading scholars and focuses on such topics as productivity measurement, accounting for productivity growth, international comparisons of productivity levels and growth rates, the worldwide productivity slowdown, productivity convergence among nations, exchange rate fluctuations and competitiveness, and the causes of the apparent loss of U.S. competitiveness during the 1980s.
