The Phonology of German Richard Wiese, 2000 In this book Richard Wiese provides the most complete and up to date description presently available of the phonology of German Starting with a presentation of phonemes and their features the author then describes in detail syllables higher prosodic units phonological conditions of word formation patterns of redundancy for features phonological rules and rules of stress for words and phrases giving particular emphasis to the interaction of morphology and phonology He focuses on the present day standard language but includes occasional discussion of other variants and registers The study is informed by recent models in phonological theory and for phonologists and morphologists it provides both a rich source of material and a critical discussion of current problems and their solutions It also serves as an introduction to the sound system of German for the non specialist reader

Velar fronting in German dialects: A study in synchronic and diachronic phonology Tracy Alan Hall, 2022-11-30 Velar Fronting VF is the name for any synchronic or diachronic phonological process shifting the velar place of articulation to the palatal region of the vocal tract A well known case of VF in Standard German is the rule specifying that the fricative x assimilates to after front segments VF also refers to the change from velar sounds like k g to palatals c The book provides a thorough investigation of VF in German dialects Data are drawn from over 300 original sources for varieties that are or were spoken in Germany Austria Switzerland and other

countries VF differs geographically along three parameters A triggers B targets and C outputs VF triggers A are typically defined according to vowel height In some systems VF is induced only by high front vowels in others by high and mid front vowels and in yet others by high mid and low front vowels Some varieties treat consonants r l n as triggers while others do not VF can be nonassimilatory in which case the rule applies even in the context of back segments In many varieties of German VF targets B consist of the two fricatives x but in other dialects the targets comprise x but not In some places VF affects not only x but also velar stops and the velar nasal The output of VF C is typically palatal given the input x but in many other places it is the alveolopalatal A major theme is the way in which VF interacts with synchronic and diachronic changes creating or eliminating structures which can potentially undergo it or trigger it In many dialects the relationship between velars x and palatals is transparent because velars only occur in the back vowel context and palatals only when adjacent to front sounds In that type of system independent processes can either feed VF by creating additional structures which the latter can undergo or they can bleed it by eliminating potential structures to which VF could apply In other dialects VF is opaque In one opaque system both velars x and palatals surface in the context of front segments Thus in addition to expected front vowel plus palatal sequences i there are also unexpected ones consisting of front vowel plus velar ix In a second type of opaque system velars and palatals are found in the context of back segments hence expected sequences such as i occur in addition to unexpected ones like

Gemination, Lenition, and Vowel Lengthening: Volume 157 Kurt Goblirsch, 2018-05-24 The processes of gemination lenition and vowel lengthening are central to the study of phonology as they reveal much about the treatment of quantity in a given language Using data from older language stages modern dialects and standard languages this study examines the interdependence of vowel and consonant quantity in the history of the Germanic branch of Indo European Kurt Goblirsch focusses on the various geminations in Old Germanic languages West Germanic gemination glide strengthening and expressive gemination open syllable lengthening in German Dutch Frisian English and Scandinavian languages and the major lenitions in High German Low German and Danish as well as minor lenitions in Bavarian Franconian and Frisian dialects All of these changes are related to the development of the Germanic languages from distinctive segmental length to complementary length to syllable cut The discussion challenges traditional theoretical assumptions about quantity change in Germanic languages to argue for a new account whereby gemination lenition and vowel lengthening are interrelated

Hans Basbøll, Johannes Wagner, 2012-01-02 Keine ausführliche Beschreibung für Kontrastive Phonologie des Deutschen und Dänischen verfügbar Struktur und Dynamik des Substandards Alexandra N. Lenz, 2003 Die vorliegende Arbeit widmet sich dem Substandard, das heißt dem sprechsprachlichen Gesamtbereich unterhalb der normierten Standardsprache. Dieser wird am Beispiel der Kleinstadtregion Wittlich in der Eifel analysiert. Die Untersuchung geht multivariat vor, indem sie die areale, die soziale und die situativ-pragmatische Variationsdimension berücksichtigt. Es wurden sowohl objektive Sprachdaten als auch subjektive Einstellungsdaten erhoben, und beide Datenkomplexe werden qualitativen und quantitativ statistischen Analysen unterzogen. Als zentrales Ergebnis kristallisiert sich eine Struktur des Substandards heraus, die mittels eines sprachdynamisch neugefassten Varietätenbegriffs beschrieben wird. Während sich die variationslinguistische Diskussion bislang in der Aporie der Entscheidung zwischen einem Varietätenmodell oder einem Modell des variativen Kontinuums befand, bringt die Arbeit beide Ansätze erstmals zusammen. Alexandra Lenz wendet das gesamte methodische Instrumentarium der Varietätenanalyse vorbildlich an und erzielt damit anregende und weiterführende Einsichten in Sprachstruktur und aktuelle Sprachwandelprozesse. o Germanistik aDie Studie von Lenz macht auf eindrucksvolle Weise deutlich, dass es mit dem Instrumentarium der modernen Variationslinguistik durchaus möglich ist, auch in Regionen, für die ein eher kontinuierlicher Übergang der Sprachlagen zwischen Dialekt und Standard charakteristisch ist, situationsabhängig verwendete Sprachgebrauchsmuster zu unterscheiden. o Zeitschrift für Deutsche Philologie
