Nature-Inspired Computing and Optimization Srikanta Patnaik,Xin-She Yang,Kazumi Nakamatsu,2017-03-07 The book provides readers with a snapshot of the state of the art in the field of nature inspired computing and its application in optimization The approach is mainly practice oriented each bio inspired technique or algorithm is introduced together with one of its possible applications Applications cover a wide range of real world optimization problems from feature selection and image enhancement to scheduling and dynamic resource management from wireless sensor networks and wiring network diagnosis to sports training planning and gene expression from topology control and morphological filters to nutritional meal design and antenna array design There are a few theoretical chapters comparing different existing techniques exploring the advantages of nature inspired computing over other methods and investigating the mixing time of genetic algorithms The book also introduces a wide range of algorithms including the ant colony optimization the bat algorithm genetic algorithms the collision based optimization algorithm the flower pollination algorithm multi agent systems and particle swarm optimization This timely book is intended as a practice oriented reference guide for students researchers and professionals

The Tinkerer's Accomplice J. Scott Turner,2010-09-30 Most people when they contemplate the living world conclude that it is a designed place So it is jarring when biologists come along and say this is all wrong What most people see as design they say purposeful directed even intelligent is only an illusion something cooked up in a mind that is eager to see purpose where none exists In these days of increasingly assertive challenges to Darwinism the question becomes acute is our perception of design simply a mental figment or is there something deeper at work Physiologist Scott Turner argues eloquently and convincingly that the apparent design we see in the living world only makes sense when we add to Darwin s towering achievement the dimension that much modern molecular biology has left on the gene splicing floor the dynamic interaction between living organisms and their environment Only when we add environmental physiology to natural selection can we begin to understand the beautiful fit between the form life takes and how life works In The Tinkerer s Accomplice Scott Turner takes up the question of design as a very real problem in biology his solution poses challenges to all sides in this critical debate

The Oxford Compendium of

Visual Illusions Arthur Gilman Shapiro, Dejan Todorović, 2017 Visual illusions are compelling phenomena that draw attention to the brain's capacity to construct our perceptual world. The Compendium is a collection of over 100 chapters on visual illusions written by the illusion creators or by vision scientists who have investigated mechanisms underlying the phenomena.

Discrete and Computational Geometry and Graphs Jin Akiyama, Hiro Ito, Toshinori Sakai, 2014-11-20 This book constitutes the thoroughly refereed post-conference proceedings of the 16th Japanese Conference on Discrete and Computational Geometry and Graphs JDCDGG 2013 held in Tokyo, Japan, in September 2013. The total of 16 papers included in this volume was carefully reviewed and selected from 58 submissions. The papers feature advances made in the field of computational geometry and focus on emerging technologies, new methodology and applications, graph theory and dynamics.

Neural Networks: Artificial Intelligence and Industrial Applications Bert Kappen, Stan Gielen, 2012-12-06 Neural networks is a field of research which has enjoyed rapid expansion in both the academic and industrial research communities. This volume contains papers presented at the Third Annual SNN Symposium on Neural Networks to be held in Nijmegen, The Netherlands, 14-15 September 1995. The papers are divided into two sections: the first gives an overview of new developments in neurobiology, the cognitive sciences, robotics, vision and data modelling. The second presents working neural network solutions to real industrial problems including process control, finance and marketing. The resulting volume gives a comprehensive view of the state of the art in 1995 and will provide essential reading for postgraduate students and academic/industrial researchers.

Visual Perception Lothar Spillmann, John S. Werner, 2012-12-02 This book presents an interdisciplinary overview of the main facts and theories that guide contemporary research on visual perception. While the chapters cover virtually all areas of visual science from philosophical foundations to computational algorithms and from photoreceptor processes to neuronal networks, no attempt has been made to provide an exhaustive treatment of these topics. Rather, researchers from such diverse disciplines as psychology, neurophysiology, anatomy and clinical vision sciences have worked together to review some of the most important correlations between perceptual phenomena and the underlying neurophysiological processes and mechanisms. The book is thus intended to serve as an advanced text for graduate students and as a guide for all vision researchers to understanding current progress outside their specialized fields of interest. Examines parallel processing of visual information. Discusses links between physiologically measured receptive fields and psychophysically measured perceptive fields. Presents a spatial sampling by the retina and cortical modules. Covers signal transduction and the sites of adaptation. Describes a single cell analysis of attention. Discusses computational models of vision.

Handbook of Memristor Networks Leon Chua, Georgios Ch. Sirakoulis, Andrew Adamatzky, 2019-11-12 This Handbook presents all aspects of memristor networks in an easy-to-read and tutorial style. Including many colour illustrations, it covers the foundations of memristor theory and applications, the technology of memristive devices, revised models of the Hodgkin-Huxley Equations and ion channels, neuromorphic architectures and analyses of the dynamic behaviour of memristive

networks It also shows how to realise computing devices non von Neumann architectures and provides future building blocks for deep learning hardware With contributions from leaders in computer science mathematics electronics physics material science and engineering the book offers an indispensable source of information and an inspiring reference text for future generations of computer scientists mathematicians physicists material scientists and engineers working in this dynamic field

Thought Stephen Laurence, Eric Margolis, 2024-12-17 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on Oxford Academic and offered as a free PDF download from OUP and selected open access locations This is a broad and authoritative study of one of the central topics in the study of the mind the origins of concepts The authors survey the debate between rationalists and empiricists which stretches back to the very beginnings of philosophy and has been at the centre of some of the most exciting research in cognitive science Many have charged that the debate is riddled with confusion or that rationalist approaches in particular are deeply problematic The Building Blocks of Thought offers a comprehensive rethinking of the foundations of this debate showing that these negative appraisals are based on misunderstandings Stephen Laurence and Eric Margolis argue that the debate should be understood to concern the nature of the unlearned psychological traits that provide the foundation for learning all concepts They go on to argue for a version of concept nativism according to which there is a rationalist account of the origins of many concepts across many different conceptual domains This rationalist view is developed around seven distinct arguments drawing on a wealth of data across the cognitive sciences which are shown to come together to form a unified large scale argument to the best explanation for a rationalist account of the origins of concepts Rounding out the case for concept nativism the book contrasts this view with the most important and influential empiricist views as well as alternative rationalist views including Fodor's infamous radical concept nativism and his claim that concept learning is impossible The Building Blocks of Thought argues for the enormous importance of learning and culture showing how a thoroughly rationalist approach facilitates and enhances cultural learning and provides the foundations for the best overall account of the origins of concepts Tales

Flying Fast Jets David G. Newman,2017-11-01 This book provides a detailed general overview of the human factors and performance limitations associated with flying fast jets integrating all the latest available research literature on the demanding operational tasks faced by such pilots and aircrews As such it has a strong military focus dealing with pilots of fighter aircraft attack aircraft and lead in fighter trainer aircraft that are traditionally only single or dual pilot operations The book deals not only with the issue of G force but discusses ejection and escape survival disorientation high altitude physiology pilot training and selection helmet mounted equipment situational awareness data fusion and multi sensor integration human machine interface issues and advanced cockpit design It examines the human performance issues associated with the technological advances made in fast jets such as increased manoeuvrability increased use of the pilot s head as a mounting platform for sensor and weapons systems and the complexities involved in the human machine interface within these aircraft

Perception R. Held,H.W.

Leibowitz, H.L. Teubner, 2012-12-06 This volume was designed to focus on the problems of perception and originally was to have been solely edited by Professor Hans Lukas Teuber who was a member of the editorial board which initiated production of the Handbook Accordingly he issued invitations to a number of researchers in perception asking them to contribute chapters written in a style described in his words I hope that no author will feel constrained to undertake a major search of the literature he could do instead on an area in which he has been quite active himself and where most of the issues are immediately obvious to him In this way the writing of the chapter should be enjoyable rather than a chore it should result in a personal account of the state of a given area rather than in an encyclopedic treatise the field deserves this sort of summary particularly if it is pointed toward the future and speeds the convergence of developments in sensory physiology and psychological studies of perception With the growing burden of national and international commitments including departmental headship Professor Teuber felt that it would be wise to share the editorial responsibilities for this volume and accordingly asked Professors Richard Held and Herschel Leibowitz to co edit the volume with him in the same spirit as outlined in his invitation to authors They agreed to help in this task
