helping students understand the complexity of assessment decision making as an essential component of instruction. Traditional assessment principles are integrated with contemporary educational psychology research that will enhance prospective teachers' decision making about classroom assessments that promote all students' learning and motivation. It is unique in showing how to best leverage both formative and summative assessment to boost student engagement and achievement, enabling students to understand how to integrate practical classroom constraints and realities with current knowledge about self-regulation, intrinsic motivation, and other psychological constructs that assessment needs to consider. The chapters are written by established experts who are able to effectively balance presentation of research and theory with practical applications. Notably, the volume includes very important topics rarely emphasized in other assessment texts, including assessment literacy, frameworks, diversity, equity, assessment strategies for students with special needs, and data-driven decision making. The book will be an excellent supplement for educational psychology classes or for assessment courses introducing students to current thinking about how to effectively integrate assessment with instruction.

Phye,Daniel H. Robinson,Joel Levin,2005-04-22 New US government requirements state that federally funded grants and school programs must prove that they are based on scientifically proved improvements in teaching and learning All new grants must show they are based on scientifically sound research to be funded and budgets to schools must likewise show that they are based on scientifically sound research However the movement in education over the past several years has been toward qualitative rather than quantitative measures The new legislation comes at a time when researchers are ill trained to measure results or even to frame questions in an empirical way and when school administrators and teachers are no longer remember or were never trained to prove statistically that their programs are effective Experimental Methods for Evaluating Educational Interventions is a tutorial on what it means to frame a question in an empirical manner how one needs to test that a method works what statistics one uses to measure effectiveness and how to document these findings in a way so as to be compliant with new empirically based requirements The book is simplistic enough to be accessible to those teaching and administrative educational professionals long out of schooling but comprehensive and sophisticated enough to be of use to researchers who know experimental design and statistics but don t know how to use what they know to write acceptable grant proposals or to get governmental funding for their programs Provides an overview to interpreting empirical data in education Reviews data analysis techniques use and interpretation Discusses research on learning instruction and curriculum Explores importance of showing progress as well as cause and effect Identifies obstacles to applying research into practice Examines policy development for states nations and countries *International Handbook of Psychology Learning and Teaching* Joerg Zumbach,Douglas A.
