Educating Reason Harvey Siegel, 2013-09-27 First Published in 1988 The critical thinking movement is increasingly important in the philosophy of education Beginning from the generally accepted view that children should be taught to reason not simply to repeat what they have been told it tries to establish whether it is in fact possible to teach children a set of skills which add up to thinking Siegel here examines three major conceptions of critical thinking and then puts forward his own definition of the critical thinker as one who is appropriately moved by reasons He argues that critical thinking is a fundamental educational ideal and defends the ideal against charges of indoctrination Chapters on science education and minimum competency testing highlight its practical implications for education policy and curriculum This book should be of interest to lecturers and students of education and philosophy Critical Reasoning in Contemporary Culture Richard A. Talaska, 1992-01-01 Here we have for the first time in a single volume diverse perspectives on the meaning conditions and goals of critical reasoning in contemporary culture Part One emphasizes critical reasoning and education engaging the debate over the connection between critical reasoning skills and the learning of the content Part Two offers analyses of the theoretical methodological and historical debates concerning critical reasoning abilities The authors represent a variety of disciplines and theoretical approaches which lend the book valuable intellectual pluralism The book evaluates other aspects of critical thinking such as creativity insight questioning learning practical thought interpretation intellectual prejudice and the historical and temporary aspects of thought **Critical Conversations in Philosophy of Education** Wendy Kohli, 2013-09-13 Critical Conversations in Philosophy of Education presents a series of conversations expressing many of the multiple voices that currently constitute the field of philosophy of education Philosophy of education as a discipline has undergone several turns the once marginal perspectives of the various feminisms critical Marxism and poststructuralist postmodernist and cultural theory have gained ground alongside those of Anglo analytic and pragmatic thought Just as Western philosophers in general are coming to terms with the end of philosophy pronouncement implicit in postmodernism so too are philosophers of education faced with similar challenges challenges to long held moral political aesthetic and epistemological commitments The contributors take up these challenges through a dialogical structure expressing differing positions without engaging in destructive critique The New Handbook of Research on Music Teaching and Learning Richard Colwell, Carol Richardson, 2002-04-18 Featuring chapters by the world's foremost scholars in music education and cognition this handbook is a convenient collection of current research on music teaching and learning This comprehensive work includes sections on arts advocacy music and medicine teacher education and studio instruction among other subjects

making it an essential reference for music education programs The original Handbook of Research on Music Teaching and Learning published in 1992 with the sponsorship of the Music Educators National Conference MENC was hailed as a welcome addition to the literature on music education because it serves to provide definition and unity to a broad and complex field Choice This new companion volume again with the sponsorship of MENC explores the significant changes in music and arts education that have taken place in the last decade Notably several chapters now incorporate insights from other fields to shed light on multi cultural music education gender issues in music education and non musical outcomes of music education Other chapters offer practical information on maintaining musicians health training music teachers and evaluating music education programs Philosophical issues such as musical cognition the philosophy of research theory curriculum and educating musically are also explored in relationship to policy issues In addition to surveying the literature each chapter considers the significance of the research and provides suggestions for future study Covering a broad range of topics and addressing the issues of music education at all age levels from early childhood to motivation and self regulation this handbook is an invaluable resource for music teachers researchers and scholars

Effective Learning and Teaching of Writing Gert Rijlaarsdam, Huub Bergh, Michel Couzijn, 2007-11-23 *Effective Learning and Teaching of Writing* is a handbook on research on the effective teaching and learning of writing It is a reference for researchers and educators in the domain of written composition in education *Effective Learning and Teaching of Writing* covers all age ranges and school settings and it deals with various aspects of writing and text types Research methodology varies from experimental studies to reflective classroom practitioners research This new volume in the series *Studies in Writing* brings together researchers from all kinds of disciplines involved in writing research and countries in their endeavour to improve the teaching of written composition It is the result of co operation of researchers all over the world and shows that in spite of the differences in educational regions over the world research in writing shares similar problems and tries to find answers and generate new questions The body of knowledge in this volume will inspire researchers and teachers to improve research and practice

Authenticity in and through Teaching in Higher Education Carolin Kreber, 2013-02-11 What does it mean to be authentic Why should it matter whether or not we become more authentic How might authenticity inform and enhance the social practice of the scholarship of university teaching and by implication the learning and development of students *Authenticity in and through Teaching* introduces three distinct perspectives on authenticity the existential the critical and the communitarian and shows what moving towards greater authenticity involves for teachers and students when viewed from each of these angles In developing the notion of the scholarship of teaching as an authentic practice this book draws on several complementary ideas from social philosophy to explore the nature of this practice and the conditions under which it might qualify as authentic Other concepts guiding the analysis include virtue being communicative action power critical reflection and transformation *Authenticity in and through Teaching* also introduces a vision of the scholarship of teaching whose ultimate aim it is to serve

the important interests of students These important interests it is argued are the students own striving and development towards greater authenticity Both teachers and students are thus implicated in a process of transformative learning including objective and subjective reframing redefinition and reconstruction through critical reflection and critical self reflection on assumptions It is argued that in important ways this transformative process is intimately bound up with becoming more authentic Rather than being concerned principally with rendering research evidence of what works the scholarship of teaching emerges as a social practice that is equally concerned with the questions surrounding the value desirability and emancipatory potential of what we do in teaching The scholarship of teaching therefore also engages with the bigger questions of social justice and equality in and through higher education The book combines Carolin Kreber s previous research on authenticity with earlier work on the scholarship of teaching offering a provocative fresh and timely perspective on the scholarship of university teaching and professional learning

Defending the Value of Education as a Public Good Katarzyna Wrońska, Julian Stern, 2024-02-20 Centred around a philosophical argument for contemporary education as a fundamental good this edited volume demonstrates the benefits that education brings in a civil and flourishing societal context while also critiquing the state s role in supporting and strengthening this educational focus Chapters present in depth philosophical and historical arguments that explore core aspects of education that are frequently overlooked illustrating education s role as a non partisan public good during contentious times Through this volume diverse voices are heard from those with experience of life under communism as well as life in a stable democracy arguing for example that despite differing contexts the value of education is autonomous and intrinsic Ultimately drawing on conceptual frameworks this timely volume reconciles the Anglo American Continental dialogues on education and presents novel and challenging ideas to its readers Striving to inspire new research through its various reflections on the relationship between education and the state the book will be useful to scholars researchers and academics in the fields of philosophy of education education policy sociology of education as well as theory of education The Introduction as well as Chapters 3 5 6 and 7 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution ShareAlike CC BY SA 4.0 license Chapter 9 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Transnational Higher Education in Computing Courses Jenny Carter, Clive Rosen, 2019-09-24 There has been exponential growth in transnational education TNE in the last few years as UK universities have looked to expand their markets Recipient countries have sought short cuts to developing their higher education provision which has proved a lucrative income stream for some universities But overseas collaborations are not without risk Recipient countries can be concerned with external influence over curricula quality being diluted and higher education being infected by neo imperialism These concerns are not without foundation There are risks for providers too Reputations can be damaged if

academic standards are compromised Conflicts of interest can occur between quality of provision and the pot of gold on offer Staff can view overseas collaborations as distracting from their research and commitment to home students Computing is a particularly popular subject for TNE but critical thinking analysis independent learning and creativity can be compromised Preventing plagiarism is difficult Constant changes in technology result in constant curricula revision which causes severe problems for overseas collaborations This book focuses on TNE in the computing domain However cross cultural issues challenge TNE management and administration whatever the subject area If the ever present tensions are not continuously monitored they can quickly threaten the sustainability of the collaboration This book identifies many of the threats and some of the solutions The readership for this book is truly global Any international development officer in higher education considering an overseas collaboration will benefit from this book Any academic becoming engaged in or already involved with a TNE partnership either as provider or recipient will gain information and insight into the practice and issues Researchers in TNE will discover more lines of enquiry Students considering a course with an overseas provider or in coming to the UK to study will be better prepared thereby enabling a more fulfilling and rewarding experience Anyone who has an interest in TNE whether at the senior executive level operational level delivering programmes or as a recipient of TNE should read this book The wealth of experience gathered here will provoke questions prompt debate and offer solutions It has been written by people who know the issues bear the scars and are happy to share their knowledge It will greatly benefit future transnational collaborations

Schulz,2014-08-01 This book presents a philosophy of science education as a research field as well as its value for curriculum instruction and teacher pedagogy It seeks to re think science education as an educational endeavour by examining why past reform efforts have been only partially successful including why the fundamental goal of achieving scientific literacy after several reform waves has proven to be so elusive The identity of such a philosophy is first defined in relation to the fields of philosophy philosophy of science and philosophy of education It argues that educational theory can support teacher s pedagogical content knowledge and that history philosophy and sociology of science should inform and influence pedagogy Some case studies are provided which examine the nature of science and the nature of language to illustrate why and how a philosophy of science education contributes to science education reform It seeks to contribute in general to the improvement of curriculum design and science teacher education The perspective to be taken on board is that to teach science is to have a philosophical frame of mind about the subject about education about one s personal teacher identity Fifty Modern
