Translation Activity in Late Byzantine World Panagiotis Athanasopoulos,2022-09-06 During the late

Byzantine period 1261-1453 a significant number of texts were translated from Latin but also from Arabic and other languages into Greek. Most of them are still unedited or available in editions that do not meet the modern academic criteria. Nowadays these translations are attracting scholarly attention as it is widely recognized that besides their philological importance per se they can shed light on the cultural interactions between late Byzantines and their neighbours or predecessors. To address this desideratum this volume focuses on the cultural context the translators and the texts produced during the Palaeologan era extending as well till the end of 15th c in ex-Byzantine territories. By shedding light on the translation activity of late Byzantine scholars this volume aims at revealing the cultural aspect of late Byzantine openness to its neighbours.

Combinatorics, Modeling, Elementary Number Theory: From Basic To Advanced Ivan V Cherednik, 2023-05-03. Some themes of the book: Enumerative combinatorics and basic graph theory. Introduction to dimers, tilings, magic and Latin squares, permutations, combinations, generating functions, games of chance, random walks, binomial and Poisson distributions, Catalan numbers, their generalizations and applications including roulette and pricing derivatives, Euler and Hamiltonian paths, linear and planar graphs, labeled trees and other topics on graphs; many of them are presented as exercises. Modeling: Linear recurrence relations, Fibonacci rabbits, population growth, tree growth, epidemic spread and reinfections, resonances and nuclear reactors, predator-prey relationships and stopping times. Elementary number theory: Residues, finite fields, Pisano periods, quadratic reciprocity, Pell's equation, continued fractions and Frobenius coin problem. Applications to cryptography, designs and magic squares, error-correcting codes and nonattacking queens.
