Implementation Jon Tate, Michael Engelbrecht, Jacek Koman, IBM Redbooks, 2009-03-09 This IBM Redbooks publication introduces the products concepts and technology in the IBM System Storage™ SAN Routing portfolio which is based on Cisco products and technology It also discusses the features of each product and offers examples of how you can deploy and use them The book targets storage network administrators system designers architects and IT professionals who sell design or administer SANs The rapid spread and adoption of production storage area networks SANs has fueled the need for multiprotocol routers The routers provide improved scalability security and manageability by enabling devices in separate SAN fabrics to communicate without merging fabrics into a single large SAN fabric This capability enables clients to initially deploy separate SAN solutions at the departmental and data center levels Then clients can consolidate these separate solutions into large enterprise SAN solutions as their experience and requirements grow and change Alternatively

multiprotocol routers can help to connect existing enterprise SANs for a variety of reasons For example the introduction of Small Computer System Interface over IP iSCSI provides for the connection of low end low cost hosts to enterprise SANs The use of an Internet Protocol IP in the Fibre Channel FC environment provides for resource consolidation and disaster recovery planning over long distances And the use of FC FC routing services provides connectivity between two or more fabrics without having to merge them into a single SAN To derive the maximum benefit from this book you should already be familiar with SANs Otherwise we recommend that you first read the following IBM Redbooks publications IBM TotalStorage SAN Product Design and Optimization Guide SG24 6384 Introduction to Storage Area Networks SG24 5470 Implementing an IBM Cisco SAN SG24 7545
