## **Fibrous Proteins Muscle And Molecular Motors:**

*Fibrous Proteins: Muscle and Molecular Motors* John M. Squire, David A.D. Parry, 2005-08-29 Molecular Motors and Muscle is the second of a three part series on Fibrous Proteins The books are based on a very successful workshop in Alpbach Austria on the general topic of Fibrous Proteins that gave rise to the award winning issue of Journal of Structural Biology There are two major types of protein Globular proteins which are often enzymes which speed up biochemical reactions and Fibrous proteins which often have more structural roles but can also have dynamic properties Fibrous proteins are usually either elongated molecules which pack together to form long filaments as in the case of the intermediate filaments in our hair and skin and as in collagen fibrils in tendons and bones or they are globular proteins which aggregate linearly to form long filaments such as actin filaments or microtubules Fibrous proteins act as molecular scaffolds in cells they can be involved in transport of cell organelles or even on a visible scale as in our muscles They provide the supporting structures of our skeletons bones tendons cartilage and skin They define the mechanical properties of our internal hollow organs such as the intestines heart and blood vessels They are vital for life and represent a fascinating subset of the proteome Advances in Protein Chemistry is available online on ScienceDirect full text online of volumes 53 onwards Elsevier book series on ScienceDirect gives multiple users throughout an institution simultaneous online access to an important compliment to primary research Digital delivery ensures users reliable 24 hour access to the latest peer reviewed content The Elsevier book series are compiled and written by the most highly regarded authors in their fields and are selected from across the globe using Elsevier s extensive researcher network For more information about the Elsevier Book Series on ScienceDirect Program please visit <http://www.info.sciencedirect.com/bookseries> Allows a comparison to be made between unique but related structures Quality of the text and illustrations allows ready comprehension of key protein design features Identifies fibrous protein sequence features for analysis of the human genome Analyzes design principles for fibrous protein sequences thus leading potentially to development of new devices by nanofabrication

*Fibrous Proteins: Structures and Mechanisms* David A.D. Parry, John M. Squire, 2017-01-18 This book provides the readers with an up to date review of the design structure and function of a representative selection of fibrous proteins in both health and disease The importance of the helical coiled coil a conformational motif based on the heptad repeat in the amino acid sequence of all fibrous proteins and parts of some globular proteins is underlined by three Chapters devoted to its design structure function and topology Specific proteins covered in the text and which depend on the coiled coil for their structure and function include the intermediate filament proteins tropomyosin myosin paramyosin fibrin and members of the spectrin superfamily Also described are fibrous proteins based on the pleated sheet and collagen conformations Recombinant structural proteins especially of silk and collagen are discussed in the context of developing new biomaterials with varied applications Established researchers and postgraduate students in the fields of protein chemistry biochemistry and structural biophysics

will find Fibrous Proteins Structures and Mechanisms to be an invaluable collection of topical reviews that describe the basic advances made in the field of fibrous proteins over the past decade This book written by recognized authorities in the field provides a clear account of the current status of fibrous protein research and in addition establishes the basis for deciding the most appropriate directions for future activity including the applications of protein engineering and the commercial exploitation of new biomaterials      Fibrous Proteins: Coiled-Coils, Collagen and Elastomers David A.D.
