Applied Mechanics Reviews ,1974 *Augmentation of Brain Function: Facts, Fiction and Controversy* Mikhail Lebedev, Ioan Opris, Manuel F. Casanova ,2018-09-14 Volume I entitled Augmentation of Brain Functions Brain Machine Interfaces is a collection of articles on neuroprosthetic technologies that utilize brain machine interfaces BMIs BMIs strive to augment the brain by linking neural activity recorded invasively or noninvasively to external devices such as arm prostheses exoskeletons that enable bipedal walking means of communication and technologies that augment attention In addition to many practical applications BMIs provide useful research tools for basic science Several articles cover challenges and controversies in this rapidly developing field such as ways to improve information transfer rate BMIs can be applied to the awake state of the brain and to the sleep state as well BMIs can augment action planning and decision making Importantly BMI operations evoke brain plasticity which can have long lasting effects Advanced neural decoding algorithms that utilize optimal feedback controllers are key to the BMI performance BMI approach can be combined with the other augmentation methods such systems are called hybrid BMIs Overall it appears that BMI will lead to many powerful and practical brain augmenting technologies in the future *Modern Realism in English-Canadian Fiction* Colin Hill,2012-01-01 Much of the scholarship on twentieth century Canadian literature has argued that English Canadian fiction was plagued by backwardness and an inability to engage fully with the movement of modernism that was so prevalent in British and American fiction and poetry Modern Realism in English Canadian Fiction re evaluates Canadian literary culture to posit that it has been misunderstood because it is a distinct genre a regional form of the larger international modernist movement Examining literary magazines manifestos archival documents and major writers such as Frederick Philip Grove Morley Callaghan and Raymond Knister Colin Hill identifies a modern realism that crosses regions as well as urban and rural divides A bold reading of the modern realist aesthetic and an articulate challenge to several enduring and limiting myths about Canadian writing Modern Realism in English Canadian Fiction will stimulate important debate in literary circles everywhere *Augmentation of Brain Function: Facts, Fiction and Controversy* Ioan Opris, Manuel F. Casanova, Mikhail Lebedev ,2018-09-14 The Volume II is entitled Neurostimulation and pharmacological approaches This volume describes augmentation approaches where improvements in brain functions are achieved by modulation of brain circuits with electrical or optical stimulation or pharmacological agents Activation of brain circuits with electrical currents is a conventional approach that includes such methods as i intracortical microstimulation ICMS ii transcranial direct current stimulation tDCS and iii transcranial magnetic stimulation TMS tDCS and TMS are often regarded as noninvasive methods Yet they may induce long lasting plastic changes in the brain This is why some authors consider the term noninvasive misleading when used to describe these and other techniques such as stimulation with transcranial lasers The volume further discusses the potential of neurostimulation as a research tool in the studies of perception cognition and behavior Additionally a notion is expressed that brain augmentation

with stimulation cannot be described as a net zero sum proposition where brain resources are reallocated in such a way that gains in one function are balanced by costs elsewhere In recent years optogenetic methods have received an increased attention and several articles in Volume II cover different aspects of this technique While new optogenetic methods are being developed the classical electrical stimulation has already been utilized in many clinically relevant applications like the vestibular implant and tactile neuroprosthesis that utilizes ICMS As a peculiar usage of neurostimulation and pharmacological methods Volume II includes several articles on augmented memory Memory prostheses are a popular recent development in the stimulation based BMIs For example in a hippocampal memory prosthesis memory content is extracted from hippocampal activity using a multiple input multiple output non linear dynamical model As to the pharmacological approaches to augmenting memory and cognition the pros and cons of using nootropic drugs are discussed
