**Field and Theory** Michael Church, Olav Slaymaker, 1985-01-01 This collection of papers by internationally known scientists in the field of geocryology was originally presented as a series of lectures at the University of British Columbia in 1980 1 in honour of J Ross MacKay Together they illustrate the central dilemma in a science where fieldwork must be undertaken in the harsh periglacial environment and where consequently it is difficult to test theory rigorously The papers provide a valuable overview of the current status of international research in a wide area of the field permafrost patterned ground and cold climate phenomena and processes The treatment varies from anecdotal historical and descriptive to mathematical

**Geomorphology** Athol D. Abrahams, John C. Dixon, 2020-05-10 This book first published in 1992 contains the proceedings of the 22nd Binghamton Geomorphology Symposium and highlights the quantity and diversity of periglacial geomorphic research being undertaken in Arctic and alpine environments The articles explore a variety of geomorphic processes and examine the potential impacts of global change on the nature and extent of permafrost and seasonal ice phenomena

**Geocryology** Stuart A. Harris, Anatoli Brouchkov, Cheng Guodong, 2017-09-28 This book provides a general survey of Geocryology which is the study of frozen ground called permafrost Frozen ground is the product of cold climates as well as a variety of environmental factors Its major characteristic is the accumulation of large quantities of ice which may exceed 90% by volume Soil water changing to ice results in ground heaving while thawing of this ice produces ground subsidence often accompanied by soil flowage Permafrost is very susceptible to changes in weather and climate as well as to changes in the microenvironment Cold weather produces contraction of the ground resulting in cracking of the soil as well as breakup of concrete rock etc Thus permafrost regions have unique landforms and processes not found in warmer lands The book is divided into three parts Part 1 provides an introduction to the characteristics of permafrost Four chapters deal with its definition and characteristics the unique processes operating there the factors affecting it and its general distribution Part 2 consists of seven chapters describing the characteristic landforms unique to these areas and the processes involved in their

formation Part 3 discusses the special problems encountered by engineers in construction projects including settlements roads and railways the oil and gas industry mining and the agricultural and forest industries The three authors represent three countries and three language groups and together have over 120 years of experience of working in permafrost areas throughout the world The book contains over 300 illustrations and photographs and includes an extensive bibliography in order to introduce the interested reader to the large current literature Finalist of the 2019 PROSE Awards

**Geomorphology** David J. A. Evans, 2004 The seven volumes in this series contain reproductions of papers that the individual editors regarded as the initiators of critical concepts in geomorphology **Special Report**, 1990 **Canada's Cold Environments** Hugh M. French, Olav Slaymaker, 1993 Low temperatures wind chill snow sea ice and permafrost have been primary characteristics of Canada's northern and alpine environments during the past two million years The evolution of Canada's cultural landscapes the processes of settlement of rural areas and the present interaction of Canadian industrial society with its biophysical environment are all deeply influenced directly or indirectly by the frigidity of the greater part of the country The phenomenon of global warming if it occurs will lessen this coldness but its impact on temperature extremes sea ice regimes vegetation snow distribution permafrost glaciers lakes rivers and mountain hazards are all the subject of intensive research the highlights of which are reviewed in Canada's Cold Environments Eleven of Canada's leading geographers geologists and ecologists provide an authoritative yet readable scientific statement about the physical nature of Canada's coldness They focus on the distinctive attributes of Canada's cold environments their temporal and spatial variability and the constraints that coldness places on human activity The book is aimed at environmental scientists at all levels who need informed overviews of the substantive findings on a range of cold related topics **Ground Freezing 2000 - Frost Action in Soils** J.F. Thimus, 2020-09-10 There has been increasing interest in the use of Artificial Ground Freezing AGF in forming efficient barriers to prevent pollution penetrating geological deposits This volume includes papers on heat and mass transfer frost susceptibility and frost heave and mechanical properties Mountain Environments John Gerrard, 1990 Using examples chosen from a variety of geographical settings and scales A J Gerrard presents a novel approach to the study of mountain environments He provides a framework in which mountains as special environments can be studied and shows how no matter what their location or origin all mountain regions share common characteristics and undergo similar shaping processes Gerrard's integrated approach combines ecological climatological hydrological volcanic and environmental management concerns in a systematic treatment of mountain geomorphology He begins by examining the special nature of mountains including a new classification of mountain types He discusses mountain ecosystems stressing the interaction between biota soil climate relief and geology examines the high energy systems of weathering and mass movement and analyzes the role of rivers and hydrology and the processes of slope evolution Two chapters are devoted to the particular characteristics of glaciation and vulcanism in mountain formation The book concludes with a discussion of the

special problems that human use of mountain regions create including engineering natural hazards soil erosion and the concept of integrated development A J Gerrard is Lecturer in Geography at the University of Birmingham England

Permafrost Hydrology Ming-ko Woo, 2012-04-14 Permafrost Hydrology systematically elucidates the roles of seasonally and perennially frozen ground on the distribution storage and flow of water Cold regions of the World are subject to mounting development which significantly affects the physical environment Climate change natural or human induced reinforces the impacts Knowledge of surface and ground water processes operating in permafrost terrain is fundamental to planning management and conservation This book is an indispensable reference for libraries and researchers an information source for practitioners and a valuable text for training the next generations of cold region scientists and engineers

**Inventing the Earth** Barbara Kennedy, 2008-04-15 This book chronicles how successive generations of natural philosophers geologists and geomorphologists have come to invent the view of the Earth over the past 250 years Chronicles how successive generations of natural philosophers geologists and geomorphologists have come to invent different views of the Earth over the last 250 years Uses as its central viewpoint changing ideas about the significance of the action of rain and rivers on the Earth's surface Shows how our contemporary truths have come to be accepted and exposes the frailty of even the most impeccably scientific visions of the Earth

**The Permafrost Environment** Stuart A. Harris, 2021-09-28 Originally published in 1986

The Permafrost Environment examines how the search for oil gas and minerals in the arctic region instigated new and vitally important needs to understand the permafrost environment The construction of roads airfields buildings and pipelines in this inhospitable environment has posed enormous problems for engineers and geologists This book is a comprehensive review of the nature of the permafrost environment and its utilization It looks at environmental processes and their effects and examines the management problems which result It provides a detailed look at how normal procedures for construction etc need to be modified to cope with the special conditions and it gives examples from throughout the arctic region including Canada Siberia Alaska Greenland and Northern Scandinavia **The Periglacial Environment** Hugh M.
