In 1968 when I forsook horticulture and plant physiology to try with the help of Sea Grant funds wetland ecology it didn't take long to discover a slim volume published in 1959 by the University of Georgia and edited by R A Ragotzkie L R Pomeroy J M Teal and D C Scott entitled Proceedings of the Salt Marsh Conference held in 1958 at the Marine Institute Sapelo Island Ga Now forty years later the Sapelo Island conference has been the major intellectual impetus and another Sea Grant Program the major backer of another symposium the International Symposium Concepts and Controversies in Tidal Marsh Ecology This one re examines the ideas of that first conference ideas that stimulated four decades of research and led to major legislation in the United States to conserve coastal wetlands It is dedicated appropriately to two then young scientists Eugene P Odum and John M Teal whose inspiration has been the starting place for a generation of coastal wetland and estuarine research I do not mean to suggest that wetland research started at Sapelo Island In 1899 H C Cowles described successional processes in Lake Michigan freshwater marsh ponds There is a large and valuable early literature about northern bogs most of it from Europe and the former USSR although Eville Gorham and R L Lindeman made significant contributions to the American literature before 1960 V J

Ecology of Tidal Freshwater Forested Wetlands of the Southeastern United States William H. Conner,Thomas W. Doyle,Ken W. Krauss,2007-06-24 Tidal freshwater forested wetlands represent an intriguing and und studied type of ecosystem in the southeastern United States The phy ographic position of tidal freshwater forested wetlands in occupying low lying coastal areas makes them susceptible to upland runoff tidal flo ing saltwater intrusion and other global climate change phenomena While information on them is rather sparse in the scientific literature these ecosystems are among the most sensitive to sea level rise and increased drought or flood frequency Tidal freshwater forested wetlands are readily impacted by acute and chronic exposure to even low levels of salinity The combined stress of flooding and salinity may compound the threat in these systems such that the margin for survival and compensation to changing climate is much less than for other coastal habitats In this book we bring together principal investigators whose research focus has targeted the drology biogeochemistry community ecology forestry stress physiology and restoration of tidal freshwater forested wetlands in the southeastern United States It is our foremost intent to develop an up to date treatise that includes not only peer reviewed journal articles but also the dispersive grey literature on

the topic in order to spark future research interest in tidal freshwater forested wetlands and to provide land managers with a concise overview of research findings We have thus formalized all scientific and common names into the standard of ITIS Integrated Taxonomic Information System <http://www.itis.gov> [Aquatic Monocotyledons of North America](#) Donald H. Les, 2020-05-10 This book brings together information on the natural history ecology and systematics of North American aquatic monocotyledons The book is an overview of the biology of major aquatic species by compiling information from numerous sources that lie scattered among the primary literature herbarium databases and other reference sources Information on more than 300 species in 87 genera of monocotyledons will be included Recent phylogenetic analyses will be incorporated Although focusing specifically on North America the cosmopolitan distribution of many aquatic plants should make this an attractive text to people working virtually anywhere outside of the region as well

Key Selling Features The primary source of natural history information on aquatic plants Comprehensive lists of ecological associates Synthetic overview of systematic relationships of aquatic species and genera Practical information for rare and invasive plant managers Essential guide to facilitate wetland delineation

[Wetlands](#) Mark S Dennison, James F Berry, 1993 This book is intended as a practical guide to scientific legal and technical issues concerning wetlands As such it is written in the most practical terms with numerous helpful examples and case studies of how specific issues should best be addressed The book is organized in a way that exposes the reader in logical succession to the full gamut of complex scientific legal and technical aspects of wetlands This book recognizes that wetland science law and technology are interdependent disciplines Most other works focus on one of these disciplines while perhaps providing some cursory treatment of related disciplines This book attempts to meld several different perspectives on the subject of wetlands and to show the interrelationships between the various professions that deal with wetland issues The book is organized as a guide through the various scientific legal and technical components of wetlands Within each individual chapter extensive cross referencing is provided to help the reader link related aspects of the issue being discussed Further within the presentation of each separate chapter is a discussion of how the various scientific legal and technical aspects of the subject interrelate Each chapter has been written by a known authority with specialized experience in the topic being presented
