Horadam, 2001-12-14 It isn't that they can't see the solution. It is. Approach your problems from the right end and begin with the answers. Then one day that they can't see the problem perhaps you will find the final question. O. K. Chesterton. The Scandal of Father. The Hermit. Clad in Crane Feathers. In R. Brown. The point of a Pin. van Ouliks. The Chinese Maze Murders. Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics. However, the tree of knowledge of mathematics and related fields does not grow only by putting forth new branches. It also happens quite often in fact that branches which were thought to be completely disparate are suddenly seen to be related. Further, the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years: measure theory is used non-trivially in regional and theoretical economics; algebraic geometry interacts with physics; the Minkowski lemma, coding theory and the structure of water meet one another in packing and covering theory; quantum fields, crystal defects and mathematical programming profit from homotopy theory; Lie algebras are relevant to filtering and prediction; and electrical engineering can use Stein spaces. And in addition to this there are such new emerging subdisciplines as experimental mathematics, CFD, completely integrable systems, chaos, synergetics and large scale order which are almost impossible to fit into the existing classification schemes. They draw upon widely different sections of mathematics.

Applications of Fibonacci Numbers G.E. Bergum, Andreas N. Philippou, Alwyn F. Horadam, 2012-12-06 This book contains 58 papers from among the 68 papers presented at the Fifth International Conference on Fibonacci Numbers and Their Applications which was held at the University of St Andrews, St Andrews, Fife, Scotland, from July 20 to July 24, 1992. These papers have been selected after a careful review by well-known referees in the field and they range from elementary number theory to probability and statistics.
