Fibrinolytics and Antifibrinolytics Fritz Markwardt, 1978-09-01 Disturbances of haemostasis and thromboembolic disorders still constitute a great problem in clinical practice Increasing insight into the mechanism of blood coagulation has led to more effective therapy and prophylaxis Particularly the understanding of the biochemistry of fibrinolysis has provided possibilities for the pharmacological interference of these processes which has resulted in effective haemostatic agents and useful antithrombotic ones The development of antifibrinolytics for interfering with pathological fibrinolytic processes is nearly complete and has led to the development of drugs essential to the therapy of hyperfibrinolytic bleeding The search for fibrinolytics for dissolving intravascular thrombi has led to highly effective compounds This development is still under way and promising results are hoped Spontaneous dissolution of blood clots is a phenomenon which was described a century ago First investigations of this process assured that there is in the organism a system capable of removing the fibrin which is formed during blood coagulation after it has fulfilled its physiological function This fibrinolytic system is specifically adapted to the degradation of insoluble fibrin into soluble degradation products In the past 30 years thorough investigation of this system has clarified the fibrinolytic process its physiological role and its meaning as a pathogenetic principle A good knowledge of these processes is required for an understanding of the effects and side effects of fibrinolytics and antifibrinolytics which comprise the basis of methods for the detection of fibrinolytic processes in the organism and of the control of therapy with these drugs

Instant Pharmacology Kourosh Saeb-Parsy, Ravi G. Assomull, Fakhar Z. Khan, Kasra Saeb-Parsy, Eamonn Kelly, 1999-06-18 Written by students for students Instant Pharmacology represents a novel approach to the study of pharmacology and provides an accessible and exhaustive yet concise account of pharmacology The book first introduces readers to the basic principles of pharmacodynamics and pharmacokinetics which are obviously essential for understanding the action of all drugs and it is subsequently divided into four parts Part One covers the main

chemical transmitters which mediate all bodily processes and are the site of much pharmacological intervention A systematic account of the pharmacological treatment of major clinical conditions is presented in Part Two where emphasis is placed primarily on the principles upon which therapy is based rather than overshadowing these principles with detailed features of individual drugs Part Three comprises a Dictionary of Drugs alphabetically listing all the drugs encountered in Parts One and Two Entries in the dictionary describe in detail the clinical uses mechanisms of action pharmacokinetics and the main adverse effects of a specific agent Finally to allow readers to evaluate their own progress in the subject Part Four is a self assessment section including multiple choice questions with answers covering all the topics in Instant Pharmacology Instant Pharmacology will make the study of pharmacology a more rewarding and enjoyable process and is essential reading for all undergraduate students of pharmacology pharmacy and related courses as well as preclinical medical and dental students
