

FIBROBLAST GROWTH FACTORS

- ❖ Family of growth factors involved in *angiogenesis*, *wound healing*, and *embryonic development*.
- ❖ FGFs are key players in the processes of *proliferation* and *differentiation* of wide variety of cells and tissues.
- The FGF family consists of *18 ligands* that bind to four homologous high-affinity *FGFRs* (FGFR1–FGFR4).
- The FGFs are *secreted polypeptidic growth factors* that bind to receptors expressed at the cell surface of target cells.

Fibroblast Growth Factors Xiaokun Li,2018-06-20 Fibroblast Growth Factors presents research and results from the leading global research group on FGF providing up to date and comprehensive coverage of the field The book describes the history basic research and growth engineering technology involved with FGFs while also introducing detailed research methods It comprises eight chapters that detail successes and problems in relation to wound healing of engineered growth factors and considers injury repair and regeneration non mitogenic mutants structure modification pathology physiology pharmacology development FGF FGFR inhibitors bioengineering and new drug development It will serve as a key reference

book for researchers working on FGFs Focuses on the growth engineering aspects of FGF based drug development and its clinical applications Presents useful information on the history of FGFs along with basic research and growth engineering technology Provides detailed practical research methods and results obtained on FGFs Considers the successes and problems in engineering technology Offers up to date comprehensive coverage from the world s leading research group
