Beedy, Edward R. Pandolfino, 2013-06-17 This beautifully illustrated and user friendly book presents the most up to date information available about the natural histories of birds of the Sierra Nevada the origins of their names the habitats they prefer how they communicate and interact with one another their relative abundance and where they occur within the

region Each species account features original illustrations by Keith Hansen In addition to characterizing individual species Birds of the Sierra Nevada also describes ecological zones and bird habitats recent trends in populations and ranges conservation efforts and more than 160 rare species It also includes a glossary of terms detailed maps and an extensive bibliography with over 500 citations Seabird Energetics G. Causey Whittow, 2012-12-06 Seabird Energetics is a composite volume with a coherent theme It makes a valuable contribution to our understanding of the costs of breeding the significance of which goes far beyond physiology as a brief historical perspective may illustrate After decades of mainly anecdotal observations by naturalists with an interest in seabirds there was still so little information that in 1954 David Lack in his book The Natural Regulation of Animal Numbers was forced to ignore seabirds in a way that would be unthinkable today The late fifties however produced a seminal contribution to seabird ecology and behaviour in the series of papers which stemmed from the Centenary Expedition of the British Ornithologists Union to Ascension Island Not only had quantitative ecology become the norm but the interest aroused by the European Ethological approach to bird behaviour had led to properly descriptive and analytical studies of seabird behaviour The complex interactions between social behaviour and ecology then received more attention and the sixties and seventies brought a flood of papers on ecology and on some social aspects of breeding ecology V C Wynne Edwards linked these two as part of his attempt to understand the mechanism of the regulation of animal populations in his book Animal Dispersion in Relation to Social Behaviour 1962 He paid considerable attention to seabirds and the phenomena of clutch and brood size deferred breeding rest years etc although unfortunately the most relevant studies were yet to come **Bull's Birds of New York State** Emanuel Levine, 2019-05-15 Whether you watch birds on the shores of Long Island at the Bashakill Marsh at Niagara Falls or just at your backyard feeder this volume will help you appreciate what our Empire State has to offer It will give you a historical perspective and it will tell you what we can hope to look forward to in the future if we are vigilant stewards of our natural world Governor George E Pataki The bible of the state's birders since its publication in 1974 John Bull's Birds of New York State has now been completely revised and updated by the Federation of New York State Bird Clubs This eagerly awaited survey of bird life in the state today provides new and thorough accounts of all 451 species on the official New York State checklist The book features 7 new maps 4 in full color and 30 striking sketches by bird artist Dale Dyer Birders will find chapters covering topics from the prehistoric birds of the region to contemporary bird habitats and the ways in which current classification is being affected by DNA data and research The species accounts themselves pay particular attention to date parameters and frequency of occurrence details that are important to the active birder Where applicable full subspecies discussions are included Meticulously prepared by the editor Emanuel Levine and the more than 70 members of the Federation who served as authors this book will prove invaluable to birdwatchers statewide whether backyard feeder watchers casual birders or dyed in the wool enthusiasts
