LaFreniere, 2012-07 *A New Climate for Theology* Sallie McFague, 2008-04-03 Climate change promises monumental changes to human and other planetary life in the next generations Yet government business and individuals have been largely in denial of the possibility that global warming may put our species on the road to extinction Further says Sallie McFague we have failed to see the real root of our behavioral troubles in an economic model that actually reflects distorted religious views of the person At its heart she maintains global warming occurs because we lack an appropriate understanding of ourselves as inextricably bound to the planet and its systems *A New Climate for Theology* not only traces the distorted notion of unlimited desire that fuels our market system it also paints an alternative idea of what being human means and what a just and sustainable economy might mean Convincing specific and wise McFague argues for an alternative economic order and for our relational identity as part of an unfolding universe that expresses divine love and human freedom It is a view that can inspire real change an altered lifestyle and a form of Christian discipleship and desire appropriate to who we really are World Histories from Below Antoinette Burton, Tony Ballantyne, 2022-02-10 History has traditionally privileged elites and their accomplishments *World Histories from Below* provides an antidote placing ordinary people and subordinated subjects at the heart of the themes it explores Arguing that disruption and dissent are overlooked

agents of historical change it takes a global view of topics including political revolution religious conversion labour struggles and body politics This 2nd edition includes two additional chapters on indigenous peoples migration and environmental histories from below With an updated preface this enhanced text also includes additional images and case studies to grapple with themes that have more recently come to the fore such as populism and the environment Offering a study of these themes from 1750 to the present day *World Histories from Below* refocuses our entire approach to teaching world history

Issues in Peace and Conflict Studies CQ Researcher, 2010-10-12 Key Features *The Best American Science and Nature Writing 2016* Amy Stewart, 2020-12-15 This anthology collects some of the year's best science and nature writing from climate change to killer beetles an exposé of nail salons and more As guest editor Amy Stewart says in her introduction science writers get into the game with all kinds of noble high minded ambitions We want to educate To enlighten But at the end of the day we're all writers We're just like novelists memoirists and poets We're entertainers The writers in this anthology pull off that wonderful feat of turning hard research into page turning narrative From a Pulitzer Prize winning essay on the earthquake that could decimate the Pacific Northwest to the astonishing work of investigative journalism that transformed the nail salon industry this is a collection of hard hitting and beautifully composed writing on the wonders dangers and oddities of scientific innovation and our natural world *The Best American Science and Nature Writing 2016* includes Kathryn Schulz Sarah Maslin Nir Charles C Mann Oliver Sacks Elizabeth Kolbert Gretel Ehrlich and others *The Complete Idiot's Guide to Global Warming* Michael Tennesen, 2008 The rapid warming of the Earth's climate has been a concern for decades In the past there were sceptics who either doubted global climate change altogether or who at least doubted that humanity was the cause but today almost all scientists agree that a global warming trend is evident and caused by human activity Though many of us understand that this means temperatures will on average rise the science and the resulting social economic and political implications of such a change are far reaching and complex **The Anthropocene in Global Media** Leslie Sklair, 2020-11-22 This book offers the first systematic study of how the Anthropocene is reported in mass media globally drawing parallels between the use or misuse of the term and the media's attitude towards the associated issues of climate change and global warming Identifying the potential dangers of the Anthropocene provides a useful path into a variety of issues that are often ignored misrepresented or sidelined by the media These dangers are widely discussed in the social sciences environmental humanities and creative arts and this book includes chapters on how the contributions of these disciplines are reported by the media Our results suggest that the natural science and mass media establishments and the business and political interests which underpin them tend to lean towards optimistic reassurance the good Anthropocene rather than pessimistic alarmist stories in reporting the Anthropocene In this volume contributors explore how dangerous this neutralizing of the Anthropocene is in undermining serious global action in the face of the potential existential risks confronting humanity The book presents results from media in more than 100 countries in all major languages across the

globe It covers the reporting of key environmental issues such as the impact of climate change and global warming on oceans forests soil biodiversity and the biosphere We offer explanations for differences and similarities in how the media report the Anthropocene in different regions of the world In doing so the book argues that though it is still controversial the idea of the Anthropocene helps to concentrate minds and behaviour in confronting ongoing ecological and Coronavirus crises The Anthropocene in Global Media will be of interest to students and scholars of environmental studies media and communication studies and the environmental humanities and all those who are concerned about the survival of humans on planet Earth

Environmental Philosophy Liam Leonard, John Barry, Marius De Geus, 2013-10-24 What impact are we having on the environment around us How can we limit the effect of human life on the natural world These questions and more are considered in *Advances in Sustainability and Environmental Justice* volume 13 which looks at environmental philosophy humanity's place in the world and how we can live in harmony with our planet

Japan at Nature's Edge Ian Jared Miller, Julia Adeney Thomas, Brett L. Walker, 2013-07-01 *Japan at Nature's Edge* is a timely collection of essays that explores the relationship between Japan's history culture and physical environment It greatly expands the focus of previous work on Japanese modernization by examining Japan's role in global environmental transformation and how Japanese ideas have shaped bodies and landscapes over the centuries The immediacy of Earth's environmental crisis a predicament highlighted by Japan's March 2011 disaster brings a sense of urgency to the study of Japan and its global connections The work is an environmental history in the broadest sense of the term because it contains writing by environmental anthropologists a legendary Japanese economist and scholars of Japanese literature and culture The editors have brought together an unparalleled assemblage of some of the finest scholars in the field who rather than treat it in isolation or as a unique cultural community seek to connect Japan to global environmental currents such as whaling world fisheries mountaineering and science mining and industrial pollution and relations with nonhuman animals The contributors assert the importance of the environment in understanding Japan's history and propose a new balance between nature and culture one weighted much more heavily on the side of natural legacies This approach does not discount culture Instead it suggests that the Japanese experience of nature like that of all human beings is a complex and intimate negotiation between the physical and cultural worlds Contributors Daniel P Aldrich Jakobina Arch Andrew Bernstein Philip C Brown Timothy S George Jeffrey E Hanes David L Howell Federico Marcon Christine L Marran Ian Jared Miller Micah Muscolino Ken ichi Miyamoto Sara B Pritchard Julia Adeney Thomas Karen Thornber William M Tsutsui Brett L Walker Takehiro Watanabe

water sources and other opportunities for business and management exploration *Humanity's Footprint* Walter K Dodds, 2008-02-06 For the first time in history humans have exceeded the sustaining capacity of Earth's global ecosystems. Our expanding footprint has tremendous momentum and the insidious explosion of human impact creates a shockwave that threatens ecosystems worldwide for decades, possibly centuries. Walter K Dodds depicts in clear nontechnical terms the root causes and global environmental effects of human behavior. He describes trends in population growth, resource use, and global environmental impacts of the past two centuries, such as greenhouse effects, ozone depletion, water pollution, and species extinctions and introductions. Dodds also addresses less familiar developments, such as the spread of antibiotic-resistant genes in bacteria and the concentration of pesticides in the Arctic and other remote ecosystems. He identifies fundamental human activities that have irreversible effects on the environment and draws on recent social science and game theory results to explain why people use more than their share. Past behavior indicates that as resources grow scarce, humans will escalate their use of what remains instead of managing their consumption. *Humanity's Footprint* paints a lively but ultimately sobering picture of our environmental predicament. Dodds calls for a consilient approach to socioenvironmental restoration that draws on new thinking from across disciplines to develop sustainable solutions to global environmental problems.
