Field Responsive Polymers Electroresponsive Photoresponsive And Responsive Polymers In Chemistry And Biology:

Field Responsive Polymers Ishrat M. Khan,1999 The twenty two chapters in this volume present state of the art research and discuss some of the potential applications of electroresponsive photoresponsive and responsive polymers in chemistry and biology Its comprehensive nature makes it ideal for polymer scientists materials scientists and physicists

NASA Langley Scientific and Technical Information Output: 1999 ,2000 **Smart Material Systems** Ralph C. Smith,2005-01-01 This book describes several novel applications currently under investigation that exploit the unique actuator and sensor capabilities of smart material compounds In addition to present and projected applications this book provides comprehensive coverage of both linear and nonlinear modeling techniques necessary to characterize materials in a manner that facilitates transducer design and control development The author focuses on ferroelectric magnetic and shape memory compounds and also addresses applications exploiting amorphous and ionic polymers magnetorheological compounds and fiber optic sensors By providing a unified treatment of both linear and nonlinear characterization frameworks Smart Material Systems Model Development encompasses both low to moderate drive levels which constitute the primary focus of most present texts and the high drive regimes dictated by present and future applications This will significantly enhance the design of transducers and control systems which exploit the unique actuator and sensor capabilities provided by smart material compounds

Materials Matter Ken Geiser,2001-05-25 The products we purchase and use are assembled from a wide range of naturally occurring and manufactured materials But too often we create hazards for the ecosystem and human health as we mine process distribute use and dispose of these materials Until recently most research has focused on the waste end of material cycles This book argues that the safest and least costly point at which to avoid environmental damage is when materials are first designed and selected for use in industrial production Materials Matter presents convincing evidence that we can use fewer materials and eliminate the use of many toxic chemicals by focusing directly on material chemical use when products are designed It also shows how manufacturers can save money by increasing the effectiveness of material use and reducing the use of toxic chemicals It advocates new directions for the material sciences and government policies on materials And it argues that manufacturers suppliers and customers need to set more socially responsible policies for products and services to achieve higher environmental and health goals

Nonlinear Optical Transmission Processes and Organic Photorefractive Materials Christopher M. Lawson,Klaus Meerholz,Society of Photo-optical Instrumentation Engineers,2002 *Optical Sensors and Switches* V. Ramamurthy,Kirk S.
