**Subject** Kurt Danziger, 1994-01-28 Constructing the Subject traces the history of psychological research methodology from the nineteenth century to the emergence of currently favored styles of research in the second quarter of the twentieth century Kurt Danziger considers methodology to be a kind of social practice rather than simply a matter of technique Therefore his historical analysis is primarily concerned with such topics as the development of the social structure of the research relationship between experimenters and their subjects as well as the role of the methodology in the relationship of investigators to each other in a wider social context The book begins with a historical discussion of introspection as a research practice and proceeds to an analysis of diverging styles of psychological investigation There is an extensive exploration of the role of quantification and statistics in the historical development of psychological research The influence of the social context on research practice is illustrated by a comparison of American and German developments especially in the

field of personality research In this analysis psychology is treated less as a body of facts or theories than a particular set of social activities intended to produce something that counts as psychological knowledge under certain historical conditions This perspective means that the historical analysis has important consequences for a critical understanding of psychological methodology in general

Foundations of the Mind Evgenii Vasil'evich Subbotskii, 1993 In the wake of Jean Piaget s work on children s understanding of reality it is generally accepted that by age two children assume that an object hidden in a box will remain there unchanged until someone tampers with it Eugene Subbotsky persuasively demonstrates that many children and some adults will often accept mysterious disappearances and creations perceiving them not as tricks or illusions but as actual occurrences His analysis clearly shows that alongside our everyday belief in object permanence we also have a set of quasi magical beliefs that can be activated by appropriate situations and behaviors The acceptability of these beliefs will vary from culture to culture and will be widespread among preliterate peoples but less obvious in advanced industrial countries The author a Russian psychologist draws on his own extensive research and examines other taken for granted concepts such as the distinction between animate and inanimate Foundations of the Mind amply illustrated with experimental material has enormous implications for the study of both child development and the psychology of human beliefs It attacks our complacent and often culturally biased faith in the nature of reality and as such will become required reading for all psychologists

Thinking in Psychological Science Jaan Valsiner, 2017-12-02 This book explores the development of ideas in psychology s past It is the initial volume in a series intended to shape such ideas into a valuable resource for the discipline s future Scientists in general are known to ignore their own history considering it to be a graveyard of failures In Thinking in Psychological Science selected ideas of key figures in the cognitive comparative and developmental sides of psychology Karl Duncker Karl Böhler Tamara Dembo Zing Young Kuo C Lloyd Morgan Alexander

Chamberlain and Arnold Gesell are traced and the social contexts of their ideas are given a collective analysis focusing on the potential of these ideas for the present state of psychology. Representing the scientist as hero has become a necessary component when applying for research monies from governmentally controlled funding agencies. Yet the reality is just the opposite. Science is not just the product of heroes; it is the product of many individuals who often search for solutions to basic problems throughout their lifetimes while only a few arrive at breakthroughs. Still, familiarity with the flow of thought in the efforts to solve the basic problems of humankind is necessary for any understanding of creativity. This book analyzes the processes involved in the search for solutions to major theoretical problems of development. Kuo Gesell, action and cognition, Bihler, Bunker Dembo, and methodology Morgan. Ultimately, this is an exciting volume that reveals real science in the making. Thinking in Psychological Science will be of interest to students of the social sciences and intellectual history. It is ideal for graduate and upper level undergraduate courses in psychology, the sociology of science, and cognitive science. **Gestalt**

*German Art History and Scientific Thought* Mitchell B. Frank, 2017-07-05 A fresh contribution to the ongoing debate between Kunstwissenschaft scientific study of art and Kunstgeschichte art history this essay collection explores how German speaking art historians of the late nineteenth and early twentieth century self consciously generated a field of study Prominent North American and European scholars provide new insights into how a mixing of diverse methodologies took place in order to gain a more subtle and comprehensive understanding of how art history became institutionalized and legitimized in Germany One common assumption about early art historical writing in Germany is that it depended upon a simplistic and narrowly defined formalism This book helps to correct this stereotype by demonstrating the complexity of discussion surrounding formalist concerns and by examining how German speaking art historians borrowed incorporated stole and made analogies with concepts from the sciences in formulating their methods In focusing on the work of some of the well known fathers of the discipline such as Alois Riegl and Heinrich Wölfflin as well as on lesser known figures the essays in this volume provide illuminating and sometimes surprising treatments of art history's prior and understudied interactions with a wide range of scientific orientations from psychology sociology and physiognomics to evolutionism and comparative anatomy
