Communicating Popular Science S. Perrault, 2013-07-12 Technoscientific developments often have far reaching consequences both negative and positive for the public Yet because science has the authority to decide which judgments about scientific issues are sound public concerns are often dismissed because they are not part of the technoscientific paradigm they question This book addresses the role of science popularization in that paradox it explains how science writing works and argues that it can do better at promoting public discussions about science related issues To support these arguments it situates science popularization in its historical and cultural context provides a conceptual framework for analyzing popular science texts and examines the rhetorical effects of common strategies used in popular science writing

Twenty six years after Dorothy Nelkin's groundbreaking book *Selling Science How the Press Covers Science and Technology* popular science writing is still not meeting its potential as a public interest genre *Communicating Popular Science* explores how it can move closer to doing so

21st Century Journalism in India Nalini Rajan, 2007-03-06 This text discusses the theories and practices of journalism in 21st India The four main sections examine dealing with the media representation of marginalized groups of society studying the coverage of important areas such as economics and science different kinds of journalistic practice and future trends of journalism

Science In Public Jane Gregory, Steven Miller, 2000-09-07 Does the general public need to understand science And if so is it scientists responsibility to communicate Critics have argued that

despite the huge strides made in technology we live in a scientifically illiterate society one that thinks about the world and makes important decisions without taking scientific knowledge into account But is the solution to this illiteracy to deluge the layman with scientific information Or does science news need to be focused around specific issues and organized into stories that are meaningful and relevant to people s lives In this unprecedented comprehensive look at a new field Jane Gregory and Steve Miller point the way to a more effective public understanding of science in the years ahead Encyclopedia of Science and Technology Communication Susanna Hornig Priest,2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news
