

The Antibiotic Development Timeline

1928

Alexander Fleming discovered the first antibiotic, penicillin.

The last class of broad-spectrum antibiotics, fluoroquinolones, was discovered.

1962

The last class of narrow-spectrum antibiotics was registered.

1984

AMR is growing and the antibiotic development pipeline is anemic and underfinanced. Innovation and new funding mechanisms are needed.

Now

Antimicrobial Resistance (AMR)

AMR occurs when pathogens become resistant to current medications, such as antibiotics, making infections harder to treat and increasing disease spread and severity.

Broad-Spectrum Antibiotics

This type of antibiotic is used when a bacterial infection is suspected, but the type of bacteria is unknown or when an infection is suspected to be caused by multiple kinds of bacteria.

Narrow-Spectrum Antibiotics

This type of antibiotic is effective against a specific group of bacteria. The bacteria causing the infection must be identified to determine a corresponding narrow-spectrum antibiotic treatment.

One Health and the Politics of Antimicrobial Resistance Laura H. Kahn, 2016-08-15 Does the use of low dose antibiotics in livestock put human health at risk Zoonoses infectious diseases such as SARS and mad cow that originate in animals and spread to humans reveal how intimately animal and human health are linked Complicating this relationship further when livestock are given antibiotics to increase growth it can lead to resistant bacteria Unfortunately there are few formal channels for practitioners of human medicine and veterinary medicine to communicate about threats to public health To address this problem Dr Laura H Kahn and her colleagues are promoting the One Health concept which seeks to increase communication and collaboration between professionals in human animal and environmental health In One Health and the Politics of Antimicrobial Resistance Dr Kahn investigates the use of antibiotics and the surge in antimicrobial resistance in food animals and humans from a One Health perspective Although the medical community has blamed the problem on agricultural practices the agricultural community insists that antibiotic resistance is the result of indiscriminate use of antibiotics in human medicine Dr Kahn argues that this blame game has fueled the politics of antibiotic resistance and hindered the development of effective policies to address the

worsening crisis Combining painstaking research with unprecedented access to international data the book analyzes the surprising outcomes of differing policy approaches to antibiotic resistance around the globe By integrating the perspectives of both medicine and agriculture and exploring the history and science behind the widespread use of growth promoting antibiotics One Health and the Politics of Antimicrobial Resistance examines the controversy in a unique way while offering policy recommendations that all sides can accept
