Lloyd,2001-06-15 The past several decades have witnessed an impressive array of conceptual and technological advances in the biomedical sciences Much of the progress in this area has developed directly as a result of new morphology based methods that have permitted the assessment of chemical enzymatic immunological and molecular parameters at the cellular and tissue levels Additional novel approaches including laser capture microdissection have also emerged for the acquisition of homogeneous cell populations

for molecular analyses These methodologies have literally reshaped the approaches to fundamental biological questions and have also had a major impact in the area of diagnostic pathology Much of the groundwork for the development of morphological methods was established in the early part of the 19 century by Francois Vincent Raspail generally acknowledged as the founder of the science of histochemistry The earliest work in the field was primarily in the hands of botanists and many of the approaches to the understanding of the chemical composition of cells and tissues involved techniques such as microincineration which destroyed structural integrity The development of aniline dyes in the early 20 century served as a major impetus to studies of the structural rather than chemical composition of tissue Later in the century however the focus returned to the identification of chemical constituents in the context of intact cell and tissue structure

Cellular Electron Microscopy J. Richard McIntosh, 2011-09-02 Recent advances in the imaging technique electron microscopy EM have improved the method making it more reliable and rewarding particularly in its description of three dimensional detail Cellular Electron Microscopy will help biologists from many disciplines understand modern EM and the value it might bring to their own work The book's five sections deal with all major issues in EM of cells specimen preparation imaging in 3 D imaging and understanding frozen hydrated samples labeling macromolecules and analyzing EM data Each chapter was written by scientists who are among the best in their field and some chapters provide multiple points of view on the issues they discuss Each section of the book is preceded by an introduction which should help newcomers understand the subject The book shows why many biologists believe that modern EM will forge the link between light microscopy of live cells and atomic resolution studies of isolated macromolecules helping us toward the goal of an atomic resolution understanding of living systems Updates the numerous technological innovations that have improved the capabilities of electron microscopy Provides timely coverage of the subject given the significant rise in the number of biologists using light microscopy to answer their questions and the natural limitations of this kind of imaging Chapters include a balance of how to do what and where next providing the reader with both practical information which is necessary to use these methods and a sense of where the field is going

Modern Methods in Analytical Morphology J. Gu, G.W. Hacker, 2012-12-06 While advances in modern medicine largely parallel our understanding of morphology discoveries in morphology are propelled by developments of new tools and means to visualize and measure tissue elements The invention of dissecting light fluorescence and electron microscopes together with advances in labeling and staining techniques are among the stepping stones of morphological progress Today we are in an exciting new era when classical morphology is being combined with developments from other disciplines The combination of morphology and immunology resulted in immunocytochemistry morphology and molecular biology led to in situ hybridization and in situ PCR Adding computer science to morphology gave birth to image analysis Combining laser technology and the microscope evolved into confocal microscope For more than a decade modern morphology has continued to develop by merging with other disciplines at a rate that is still gathering momentum providing exciting and dynamic new frontiers for other biological fields Modern Methods in Analytical Morphology based largely on the First International Workshop on

Modern Methods in Analytical Histochemistry is an updated review of the current trends in the field. It covers an extensive array of new technical developments in major disciplines of modern morphology. The authors are not only leaders in their fields but also have extensive hands-on experience with bench work. Their chapters are written in a comprehensive manner including discussion of both theoretical considerations and practical applications to give the readers a broad view of the topics covered.
