*Estadísticas de Pesca*, 2005-06-30 The FAO Yearbook of Fishery Statistics. Capture production is a compilation of statistics on nominal catches of fish, crustaceans, molluscs, and other aquatic animals, residues, and plants. The nominal catch statistics include only the production from capture fisheries, with the exclusion of aquaculture production. Former volumes of the Yearbook contain catches and aquaculture statistics combined. The statistics are presented by country or territory, species, major fishing area, and year, and for various aggregations. In order to provide complete coverage of catch statistics throughout the world where officially reported national statistics are lacking or are considered unreliable, FAO makes estimates based on the best information available.

Richards, Anthony Farrell, Colin Brauner, 2009-03-10 Periods of environmental hypoxia Low Oxygen Availability are extremely common in aquatic systems due to both natural causes such as diurnal oscillations in algal respiration seasonal flooding stratification under ice cover in lakes and isolation of densely vegetated water bodies as well as more recent anthropogenic causes e.g. eutrophication In view of this it is perhaps not surprising that among all vertebrates fish boast the largest number of hypoxia tolerant species hypoxia has clearly played an important role in shaping the evolution of many unique adaptive strategies These unique adaptive

strategies either allow fish to maintain function at low oxygen levels thus extending hypoxia tolerance limits or permit them to defend against the metabolic consequences of oxygen levels that fall below a threshold where metabolic functions cannot be maintained The aim of this volume is two fold First this book will review and synthesize the adaptive behavioural morphological physiological biochemical and molecular strategies used by fish to survive hypoxia exposure and place them within an environmental and ecological context Second through the development of a synthesis chapter this book will serve as the cornerstone for directing future research into the effects of hypoxia exposures on fish physiology and biochemistry The only single volume available to provide an in depth discussion of the adaptations and responses of fish to environmental hypoxia Reviews and synthesizes the adaptive behavioural morphological physiological biochemical and molecular strategies used by fish to survive hypoxia exposure Includes discussion of the evolutionary and ecological consequences of hypoxia exposure in fish
